**WARNING**

Disregarding any of the safety precautions and instructions contained in this Operator’s Guide, SAFETY DVD and on-product labels could cause injury including the possibility of death!

**WARNING**

This vehicle may exceed the performance of other vehicles you may have ridden. Take time to familiarize yourself with your new vehicle.

FOREWORD

Congratulations on your purchase of a new Ski-Doo® snowmobile. Whatever model you have chosen, it is backed by the Bombardier Recreational Products Inc. (BRP) warranty and a network of authorized Ski-Doo snowmobile dealers ready to provide the parts, service or accessories you may require.

Your dealer is committed to your satisfaction. He has taken training to perform the initial set-up and inspection of your snowmobile as well as completed the final adjustment required to suit your specific weight and riding environment before you took possession.

At delivery, you were informed of the warranty coverage and signed the PREDELIVERY CHECK LIST to ensure your new vehicle was prepared to your entire satisfaction.

Know Before you Go

To learn how to reduce the risk for you, your passenger or bystanders being injured or killed, read the following sections before you operate the vehicle:
- SAFETY INFORMATION
- VEHICLE INFORMATION.

Also read all safety labels on your snowmobile and watch attentively your SAFETY DVD.

We highly recommend that you take a safety riding course. Please check with your dealer or local authorities for availability in your area.

Failure to follow the warnings contained in this Operator’s Guide can result in SERIOUS INJURY or DEATH.

FREERIDE (110 cm (43.3 in) Wide Stance): This vehicle is designed for special purposes and may exceed provincial/state width limitations for trail riding. Riders must get all relevant information on local width limitations.

Safety Messages

The types of safety messages, what they look like and how they are used in this guide are explained as follows:

⚠️ WARNING Indicates a potential hazard, if not avoided, could result in serious injury or death.

⚠️ CAUTION Indicates a hazard situation which, if not avoided, could result in minor or moderate injury.

NOTICE Indicates an instruction which, if not followed, could severely damage vehicle components or other property.

About this Operator’s Guide

This Operator’s Guide has been prepared to acquaint the owner/operator and passenger with this snowmobile and its various controls, safe riding and maintenance instructions.

The following terminology in regards to operator, passenger and vehicle configuration is used as follows throughout this guide:
- Operator: refers to the person being behind the controls and driving the snowmobile.
- Passenger: refers to a person sitting behind the operator.
- 1-UP: refers to a model designed for an operator only.
- 2-UP: refers to a model designed to accommodate one passenger.

Keep this Operator’s Guide in the vehicle as you can refer to it for things such as maintenance, troubleshooting and instructing others.

Note that this guide is available in several languages. In the event of any discrepancy, the English version shall prevail.
If you want to view and/or print an extra copy of your Operator’s Guide, simply visit the following website www.operatorsguide.brp.com.

The informations contained in this document are correct at the time of publication. BRP, however, maintains a policy of continuous improvement of its products without imposing upon itself any obligation to install them on products previously manufactured. Due to late changes, some differences between the manufactured product and the descriptions and/or specifications in this guide may occur. BRP reserves the right at any time to discontinue or change specifications, designs, features, models or equipment without incurring any obligation upon itself.

This Operator’s Guide and the SAFETY DVD should remain with the vehicle when it’s sold.

SAFETY INFORMATION
GENERAL PRECAUTIONS

Avoid Carbon Monoxide Poisoning

All engine exhaust contains carbon monoxide, a deadly gas. Breathing carbon monoxide can cause headaches, dizziness, drowsiness, nausea, confusion and eventually death.

Carbon monoxide is a colorless, odorless, tasteless gas that may be present even if you do not see or smell any engine exhaust. Deadly levels of carbon monoxide can collect rapidly, and you can quickly be overcome and unable to save yourself. Also, deadly levels of carbon monoxide can linger for hours or days in enclosed or poorly ventilated areas. If you experience any symptoms of carbon monoxide poisoning, leave the area immediately, get fresh air and seek medical treatment.

To prevent serious injury or death from carbon monoxide:
– Never run the vehicle in poorly ventilated or partially enclosed areas such as garages, carports or barns. Even if you try to ventilate engine exhaust with fans or open windows and doors, carbon monoxide can rapidly reach dangerous levels.
– Never run the vehicle outdoors where engine exhaust can be drawn into a building through openings such as windows and doors.

Avoid Gasoline Fires and Other Hazards

Gasoline is extremely flammable and highly explosive. Fuel vapors can spread and be ignited by a spark or flame many feet away from the engine. To reduce the risk of fire or explosion, follow these instructions:
– Use only an approved gasoline container to store fuel.
– Strictly adhere to instructions in FUELING PROCEDURE.
– Never start or operate the engine if the fuel cap is not properly installed.

Gasoline is poisonous and can cause injury or death.
– Never siphon gasoline by mouth.
– If you swallow gasoline, get any in your eye or inhale gasoline vapor, see your doctor immediately.

If gasoline spills on you, wash with soap and water and change your clothes.

Avoid Burns from Hot Parts

The exhaust system and engine become hot during operation. Avoid contact during and shortly after operation to avoid burns.

Accessories and Modifications

Do not make unauthorized modifications, or use attachments or accessories that are not approved by BRP. Since these changes have not been tested by BRP, they may increase the risk of crashes or injuries, and they can make the vehicle illegal.

Accessory passenger seats approved by BRP and conforming to SSCC standards may be available for certain models. If such a seat is used, you must follow the guidelines and recommendations in regards to a passenger in this guide.

WARNING

Passenger seat must have a strap or handholds and must meet SSCC standards.

See your authorized Ski-Doo dealer for available accessories for your vehicle.
SPECIAL SAFETY MESSAGES

SEVERE INJURY OR DEATH can result if you do not follow these instructions:

– Always make a pre-ride inspection BEFORE you start the engine.
– Throttle mechanism should be checked for free movement and return to idle position before starting engine.
– Always attach tether cord eyelet to clothing before starting the engine.
– Never operate the engine without belt guard and brake disk guard securely installed or, with hood or side panels opened or removed. Never run the engine without drive belt installed. Running an unloaded engine such as without drive belt or with track raised, can be dangerous.
– Always engage parking brake before starting the engine.
– Everyone is a beginner the first time he sits behind the controls of a snowmobile regardless of previous experience in driving any other type of vehicle. The safe use of your snowmobile depends on many conditions such as visibility, speed, weather, environment, traffic, vehicle condition and the condition of the operator.
– Basic training is required for the safe operation of any snowmobile. Study your operator’s guide paying particular attention to cautions and warnings. Join your local snowmobile club: its social activities and trail systems are planned for both fun and safety. Obtain basic instructions from your snowmobile dealer, friend, fellow club member or enroll in your state or provincial safety training program.
– Any new operator must read and understand all safety labels on the snowmobile, the Operator’s Guide and watch the SAFETY DVD before operating the snowmobile. Only allow a new operator to operate the snowmobile in a restricted flat area, at least until he is completely familiar with its operation. If snowmobile operator’s training course is offered in your area, have him enroll.
– The performance of some snowmobiles may significantly exceed that of other snowmobiles you have operated. Therefore, use by novice or inexperienced operators is not recommended.
– Snowmobiles are used in many areas and in many snow conditions. Not all models perform the same in similar conditions. Always consult your snowmobile dealer when selecting the snowmobile model for your particular needs and uses.
– Injury or death may result to the snowmobile operator, passenger or bystander if the snowmobile is used in risky conditions which are beyond the operator’s, passenger’s or snowmobile’s capabilities or intended use.
– BRP recommends the operator has at least 16 years old of age.
– It is very important to inform any operator, regardless of his experience, of the handling characteristics of this snowmobile. The snowmobile configuration, such as ski stance, ski type, suspension type, track length, width and type vary from a model to another. The snowmobile handling is greatly influenced by these characteristics.
– The novice operator should become familiar with the snowmobile through practice on a level area at slow speeds before venturing far afield.
– Know your local laws. Federal, state, provincial and local government agencies have enacted laws and regulations pertaining to the safe use and operation of snowmobiles. It is your responsibility as a snowmobiler to learn and obey these laws and regulations. Respect and observance will result in safer snowmobiling for all. Be aware of the liability property damages and insurance laws regarding your equipment.
SPECIAL SAFETY MESSAGES

– Speeding can be fatal. In many cases, you cannot react or respond quickly enough to the unexpected. Always ride at a speed which is suitable to the trail, weather conditions and your own ability. Know your local rules. Speed limit may be in effect and meant to be observed.
– Always keep right hand side of the trail.
– Always keep a safe distance from other snowmobiles and bystanders.
– Remember, promotional material may show risky maneuvers performed by professional riders under ideal and/or controlled conditions. You should never attempt any such risky maneuvers if they are beyond your level of riding ability.
– Never ride this vehicle under influence of alcohol or drugs. They slow reaction time and impair judgement.
– Your snowmobile is not designed to be operated on public streets, roads or highways.
– Avoid road traveling. If you must do so, and it is permitted, reduce speed. The snowmobile is not designed to operate or turn on paving. When crossing a road, make a full stop, then look carefully in both directions before crossing at a 90° angle. Be wary of parked vehicles.
– Snowmobiling at night can be a delightful experience but because of reduced visibility, be extra cautious. Avoid unfamiliar terrain and be sure your lights are working. Always carry a flashlight and spare light bulbs.
– Never remove any original equipment from your snowmobile. Each vehicle has many built in safety features. Such features include various guards and consoles, plus reflective materials and safety labels.
– Nature is wonderful but don’t let it distract your attention from driving. If you want to truly appreciate winter’s scenery, stop your snowmobile on the side of the trail so that you don’t become a hazard to others.
– Fences represent a very serious threat for both you and your snowmobile. Give a wide berth to telephone poles or posts.
– Hidden wires unseen from a distance can cause serious accidents.
– Always wear an approved safety helmet, eye protection and a face shield. This also applies to your passenger.
– Be aware of inherent risks associated with riding off trails, such as avalanche and other natural or man made hazards or obstacles.
– Tailgating another snowmobile should be avoided. If the snowmobile in front of you slows for any reason, its operator and passenger could be harmed through your neglect. Maintain a safe stopping distance between you and the snowmobile in front of you. Depending on the terrain condition, stopping may require a little more space than you think. Play it safe. Be prepared to use evasive driving.
– Venturing out alone with your snowmobile could also be hazardous. You could run out of fuel, have an accident, or damage your snowmobile. Remember, your snowmobile is capable of traveling further in half an hour than you may be able to walk in a day. Use the “buddy system”. Always ride with a friend or member of your snowmobile club. Even then, tell someone where you are going and the approximate time you plan to return.
– Meadows sometimes have low areas where water accumulate and freezes over in winter. This ice is usually glare ice. Attempting to turn or brake on this surface could cause your vehicle to spin out of control. Never brake or attempt speeding or turning on glare ice. If you do happen to travel over such a condition, reduce speed by carefully releasing the throttle.
– Never “jump” with your snowmobile.
– While on safari, do not “gun” the throttle. Snow and ice can be thrown back into the path of a following snowmobile. In addition, when “gunning” the throttle, the vehicle digs into and leaves an irregular snow surface for others.
– Safaris are both fun and enjoyable but don’t show off or overtake others in the group. A less experienced operator might try to do the same as you and fail. When riding with others, limit your abilities to the experience of others.
– In an emergency, the snowmobile engine can be stopped by pressing down on the emergency engine stop switch or by pulling the tether cord cap from the engine cut-off switch.
– Always engage parking brake when vehicle is not in use.
– Never run the engine in a non-ventilated area and/or if vehicle is left unattended.
– Electric start models only: Never charge or boost a battery while installed on snowmobile.
– E-TEC engines: Never attempt any fuel system or electrical system maintenance or repair. Any maintenance or repair of these systems must be performed by an authorized Ski-Doo dealer.
– Ensure the path behind is clear of obstacles or bystanders before proceeding in reverse.
– Always remove the tether cord cap from engine cut-off switch when vehicle is not in operation in order to prevent accidental engine starting, to avoid unauthorized use by children or others or theft.
– NEVER stand behind or near a rotating track. Debris could be projected causing severe injuries. To remove packed snow or ice, stop engine, tilt and hold vehicle on its side and use screwdriver from tool kit.
– Do not stud the track unless it has been approved for studs. At speed, a studded track that has not been approved for studs could tear and separate from vehicle. See an authorized Ski-Doo dealer for current specific studding availability and applications.
– You may stud the track on this vehicle model. However, you MUST only use the BRP approved type stud for use on Ski-Doo snowmobiles. DO NOT EVER use conventional studs because the track thickness is thinner then our standard tracks. The stud could tear off of track and separate from vehicle.
– Always wear an approved helmet and follow the same dressing guidelines as those recommended for the operator and described in this guide.
– Make sure that you are able to achieve a stable stance, both feet resting positively on the footboards of footrests with good grip, and that you are able to hold on firmly to the handholds.
– Do not forget, with 2-UP models, the operator is responsible for the safety of the passenger. Always remember that the snowmobile handling, stability and braking distance may be affected when riding with a passenger.
– Before riding the vehicle, ask your passenger to inform you to slowdown or stop immediately if he feels uncomfortable or insecure during the ride. Keep a watchful eye on your passenger while riding.
RIDING THE VEHICLE

Each operator has a responsibility to ensure the safety of other recreationists or bystanders.

You are responsible for proper operation of your vehicle as well as training those whom you allow to ride or drive. There may be noticeable handling and performance differences from one snowmobile to the other.

A snowmobile is relatively simple to operate but like any other vehicle or mechanical equipment, it can be hazardous if you or a passenger are reckless, thoughtless or inattentive. We encourage you to have an Annual Safety Inspection of your snowmobile. Please contact an authorized Ski-Doo dealer for further details. Finally, we urge you to visit an authorized Ski-Doo dealer periodically for regular and safety maintenance, as well as snowmobile accessories you may require.

Before venturing on the trails, operate the snowmobile in a restricted flat area until you are completely familiar with its operation and feel comfortable that you can safely tackle a more demanding task. Have an enjoyable and safe ride.

Pre-Ride Inspection

WARNING

The pre-operation check is very important prior to operating the vehicle. Always check the proper operation of critical controls, safety features and mechanical components before starting.

Before Starting the Engine

1. Remove snow and ice from body including lights, seat, footrests, controls and instruments.
2. Verify that air silencer prefilter is free of snow.
3. Verify that skis and steering operate freely. Check corresponding action of skis versus handlebar.
4. Check fuel and oil for levels and leaks. Replenish if necessary and see an authorized Ski-Doo dealer in case of any leaks.
5. All storage compartments must be properly latched and they must not contain any heavy or breakable objects. Hood and side panels must be also properly latched.
6. Activate the throttle control lever several times to check that it operates easily and smoothly. It must return to idle position when released.
7. Activate the brake lever and make sure the brake fully applies before the brake control lever touches the handlebar grip. It must fully return when released.
8. Apply parking brake and check if it operates properly. Leave parking brake applied.

After Engine is Started

For proper engine starting procedure, refer to the appropriate ENGINE STARTING PROCEDURE section.

1. Check headlights high beam and low beam, taillight, stop light and pilot lamps operation.

NOTE: You may need to detach tether cord from your clothes to check lights. In such a case, attach cord as soon as you get back at the controls of the snowmobile.

2. Check the engine cut-off switch (by pulling tether cord cap) and emergency engine stop switch operation.
3. Release parking brake.
4. Refer to the WARM UP section and follow instructions.

How to Ride

Riding Gear

Proper snowmobile clothing should be worn. It should be comfortable and not too tight. Always check the weather forecast before going on a ride. Dress for the coldest weather expected. Thermal underwear next to the skin also provides a good insulation.

Wear an approved helmet at all times for safety and comfort. They provide both warmth and reduce injury. A stocking type cap, balaclava and face mask should always be carried or worn. Goggles or a face shield that attach to the helmet are indispensable.

Hands should be protected by a pair of snowmobile gloves or mitts which have sufficient insulation and allow use of thumbs and fingers for operation of controls.

Rubber bottom boots with either a nylon or a leather top, with removable felt liners are best suited for snowmobiling.

You should keep yourself as dry as possible when snowmobiling. When you come indoors, take your snowmobile suit and boots off and make certain they dry properly.

Do not wear a long scarf or loose apparel that could get caught in moving parts.

Carry colored lens goggles.

Rider Position (Forward Operation)

Your riding position and balance are the two basic principles of making your snowmobile go where you want it to. When turning on the side of a hill, you and your passenger must be ready to shift body weight to help it turn in the desired direction. Operator and passenger must never attempt this maneuvering by placing feet outside of the vehicle. Experience will teach you how much lean to put into turns at different speeds and how much you will have to lean into a slope to maintain proper balance.

Generally, the riding position for best balance and control is sitting. However, the posting, kneeling or standing positions are also used under certain conditions.

**WARNING**

Do not attempt any maneuvers if they are beyond your abilities.

Sitting

Feet on the running boards, body midway back on seat is an ideal position when operating the snowmobile over familiar, smooth terrain. Knees and hips should remain flexible to absorb shocks.

Posting

A semi-sitting position with the body off the seat and the feet under the body in a sort of squatting posture, thus allowing the legs to absorb the shocks when traveling over uneven terrain. Avoid abrupt stops.

Kneeling

This position is achieved by placing one foot firmly on the running board and the opposite knee on the seat. Avoid abrupt stops.
Standing
Place both feet on the running boards. Knees should be flexed to absorb the shock from surface bumps. This is an effective position to see better and to shift weight as conditions dictate. Avoid abrupt stop.

Rider Position (Reverse Operation)
We recommend sitting on your snowmobile when operating in reverse. Avoid standing up. Your weight could shift forward against throttle lever while operating in reverse, causing an unexpected acceleration.

**WARNING**
Unexpected acceleration when snowmobile operates in reverse can cause a loss of control.

**WARNING**
Any passenger must be able to firmly lay his feet on the footrests and keep his hands on the handholds or seat strap at all times when seated. Respecting those physical criteria is important to ensure that the passenger is stable and to reduce the risks of ejection.

The operator has a responsibility to ensure the safety of his passenger and should inform the passenger about snowmobiling basics.

- Passenger must only sit on designated passenger seat. Never allow anyone to sit between the handlebar and the operator.
- Passenger and operator must always wear an approved helmet and warm clothing appropriate for snowmobiling. Make sure that no skin is exposed.
- If the passenger feels uncomfortable or insecure for any reason, he must right away inform the operator to slowdown or stop.

Riding with a passenger on board is different than riding alone. The operator has the benefit of knowing what will be the next maneuver and is able to prepare himself accordingly. The operator also benefits from the support of his grip on the handlebar. In contrast, the passenger has to rely on the operator’s careful and safe operation of the vehicle. In addition, “body english” is limited with a passenger, and the operator can sometimes see more of the trail ahead than the passenger. Therefore, smooth starting and stopping are required with a passenger, and the operator must slow down. The operator must also warn the passenger about side hills, bumps, branches, etc. An unforeseen bump can leave you pas-
RIDING THE VEHICLE

senger-less. Remind your passenger to lean into the turn with you, without causing the vehicle to topple. Be extremely careful, go more slowly and check the passenger frequently.

**WARNING**

When riding with a passenger:
- Braking ability and steering control are reduced. Decrease speed and allow extra space to maneuver.
- Adjust suspension according to weight.

For complete information on how to adjust the suspension, please refer to the TUNE YOUR RIDE subsection.

Riding with a Child

On snowmobiles allowing two passengers (with optional seat), if you have an adult and a child for passenger, BRP recommends that the child sits in the center location. This allows an adult sitting in the rear seat to keep a visual contact with the child and hold him if necessary. In addition, the child is best protected against the wind and cold temperature if seated in the center location.

Use extra caution and go even more slowly with a young passenger. Check frequently to make certain the child has a firm grip and is properly positioned with his feet on the running boards.

Terrains/Riding Variations

Groomed Trail

On a maintained trail, sitting is the most preferred riding position. Do not race and, above all, keep to the right hand side of the trail. Be prepared for the unexpected. Observe all trail signs. Do not zigzag from one side of the trail to the other.

Ungroomed Trail

Unless there has been a fresh snowfall you can expect “washboard” and snowdrift conditions. Taken at excessive speeds, such conditions can be physically harmful. Slow down. Hold on the handlebar and assume a posting position. Feet should be under the body assuming a crouched position to absorb any jarring effect. On longer stretches of “washboard” trails, the kneeling position of one knee on the seat can be adopted. This provides a certain amount of comfort, while at the same time keeps the body loose and capable of vehicle control. Beware of hidden rocks or tree stumps partially hidden by a recent snowfall.

Deep Snow

In deep “powder” snow, your vehicle could begin to “bog” down. If this occurs, turn in as wide an arc as possible and look for a firmer base. If you do get “bogged”, and it happens to everyone, do not spin your track as this makes the vehicle sink deeper. Instead, turn the engine off, get off and move the back of the vehicle onto new snow. Then tramp a clear path ahead of the vehicle. A few feet will generally suffice. Restart the engine. Assume the standing position and rock the vehicle gently as you steadily and slowly apply the throttle. Depending on whether the front or rear end of the vehicle is sinking, your feet should be placed on the opposing end of the running boards. Never place foreign material beneath the track for support. Do not allow anyone to stand in front of, or to the rear of, the snowmobile with the engine running. Stay away from the track. Personal injury will result if contact is made with the revolving track.

Frozen Water

Traveling frozen lakes and rivers can be fatal. Avoid waterways. If you are in an unfamiliar area, ask the local authorities or residents about the ice condi-
Riding the Vehicle

Never attempt to operate your snowmobile on icy or icy surfaces. Operating a snowmobile on ice or icy surfaces can be very dangerous. The very nature of ice is foreign to good control of a snowmobile or any vehicle. Traction for starting, turning or stopping is much less than that on snow. Thus, these distances can be multiplied manyfold. Steering is minimal, and uncontrolled spins are an ever present danger. When operating on ice, drive slowly with caution. Allow yourself plenty of room for stopping and turning. This is especially true at night.

Hard Packed Snow
Don’t underestimate hard packed snow. It can be difficult to negotiate as both skis and track do not have as much traction. Best advice is to slow down and avoid rapid acceleration, turning or braking.

Uphill
There are two types of hills you can encounter — the open hill on which there are few trees, cliffs or other obstacles, and a hill that can only be climbed directly. On an open hill, the approach is to climb it by side hilling or slaloming. Approach at an angle. Adopt a kneeling position. Keep your weight on the uphill side at all times. Maintain a steady, safe speed. Continue as fast as you can in this direction, then switch to an opposite hill angle and riding position.

A direct climb could present problems. Choose the standing position, accelerate before you start the climb and then reduce throttle pressure to prevent track slippage.

In either case, vehicle speed should be as fast as the incline demands. Always slow down as you reach the crest. If you cannot proceed further, don’t spin your track. Turn the engine off, free the skis by pulling them out and downhill, place the rear of the snowmobile uphill restart the engine and ease it out with slow even throttle pressure. Position yourself to avoid tipping over, then descend.

Downhill
Downhill driving requires that you have full control of your vehicle at all times. On steeper hills, keep your center of gravity low and both hands on the handlebar. Maintain slight throttle pressure and allow the machine to run downhill with the engine operating. If a higher than safe speed is reached, slow down by braking but apply the brake with frequent light pressure. Never jam the brake and lock the track.

Side Hill
When crossing a side hill or traversing up or downhill, certain procedures must be followed. All riders should lean towards the slope as required for stability. The preferred operating positions are the kneeling position, with the knee of the down hill leg on the seat and the foot of the uphill leg on the running board, or the posting position. Be prepared to shift your weight quickly as needed. Side hills and steep slopes are not recommended for a beginner or a novice snowmobiler.

Avalanche Hazard
When riding on mountainous terrain, you should be aware of the risk of avalanches. Avalanches vary in size and shapes and generally occur in steep terrain and on unstable snow. New snow, animals, people, wind and snowmobiles can all trigger an avalanche. Avoid high marking or traversing steep terrain when avalanche conditions are possible. When in unstable snow conditions, travel should be restricted to lower angle slopes. Wind formed cornices should be avoided. Staying off un-
RIDING THE VEHICLE

stable conditions is the key to safe mountain riding. Probably most important is to be aware of the conditions and dangers on a daily basis when in the mountains. Check local avalanche forecasts and threats each day before heading out to ride and heed forecasters advice.

You should always carry a snow shovel, probe and avalanche beacon while riding on mountains. We recommend that all mountain riders take a local avalanche safety training course to become more familiar with snow conditions and learn how to properly use their equipment.

Here are some web sites that can help you finding important information:
– US: www.avalanche.org
– Europe: www.avalanches.org
– Canada: www.avalanche.ca

Slush
Slush should be avoided at all times. Always check for slush before starting across any lake or river. If dark spots appear in your tracks, get off the ice immediately. Ice and water can be thrown rearward into the path of a following snowmobile. Getting a vehicle out of a slush area is strenuous and in some cases, impossible.

Fog or Whiteout Conditions
On land or water, fog or visibility-limiting snow can form. If you have to proceed into the fog or heavy snow, do so slowly with your lights on and watch intently for hazards. If you are not sure of your way, do not proceed. Keep a safe distance behind other snowmobilers to improve visibility and reaction time.

Unfamiliar Territory
Whenever you enter an area that is new to you, drive with extreme caution. Go slow enough to recognize potential hazards such as fences or fence posts, brooks crossing your path, rocks, sudden dips, guy wires and countless other obstacles which could result in a termination of your snowmobile ride. Even when following existing tracks, be cautious. Travel at a speed so you can see what is around the next bend or over the top of the hill.

Bright Sunshine
Bright sunny days can considerably reduce your vision. The glare from sun and snow may blind you to the extent that you cannot easily distinguish ravines, ditches or other obstacles. Goggles with colored lenses should always be worn under these conditions.

Unseen Obstruction
There may be obstructions hidden beneath the snow. Driving off established trails and in the woods requires reduced speed and increased vigilance. Driving too fast in an area can make even minor obstacles very hazardous. Even hitting a small rock or stump could throw your snowmobile out of control and cause injury to its riders. Stay on established trails to reduce your exposure to hazards. Be safe, slow down and enjoy the scenery.

Hidden Wires
Always be on the lookout for hidden wires, especially in areas that may have been farmed at one time or another. Too many accidents have been caused by running into wires in the fields, guy wires next to poles and roads, and into chains and wires used as road closures. Slow speeds are a must.

Obstacles and Jumping
Unplanned jumps of snowdrifts, snowplow ridges, culverts or indistinguishable objects can be dangerous. You can avoid them by wearing the proper color lenses or face shields and by operating at a lower speed.
Jumping a snowmobile is an unsafe and dangerous practice. However, if the trail does suddenly drop away from you, crouch (stand) towards the rear of the vehicle and keep the skis up and straight ahead. Apply partial throttle and brace yourself for the impact. Knees must be flexed to act as shock absorbers.

**Turning**

Depending on terrain conditions, there are two preferred ways to turn or corner a snowmobile. For most snow surfaces, “body english” is the key to turning. Leaning towards the inside of the turn and positioning body weight on the inside foot will create a “banking” condition beneath the track. By adopting this position and positioning yourself as far forward as possible, weight will be transferred to the inside ski.

On occasion, you will find that the only way to turn the vehicle about in deep snow is to pull the snowmobile around. Do not over-exert yourself. Get assistance. Remember to always lift using your legs as opposed to your back.

**Road Crossing**

In some cases, you will be approaching the road from a ditch or snowbank. Choose a place where you know you can climb without difficulty. Use the standing position and proceed with only as much speed needed to crest the bank. Stop completely at the top of the bank and wait for all traffic to clear. Judge the drop to the roadway. Cross the road at a 90° angle. If you encounter another snowbank on the opposite side, position your feet near the rear of the vehicle. Remember, your snowmobile is not designed to operate on bare pavement and steering on this type of surface is more difficult.

**Railroad Crossing**

Never ride on railroad tracks. It is illegal. Railroad tracks and railroad rights-of-way are private property. A snowmobile is no match for a train. Before crossing a railroad track, stop, look and listen.

**Night Rides**

The amount of natural and artificial light at a given time can effect your ability to see or to be seen. Nighttime snowmobiling is delightful. It can be a unique experience if you acknowledge your reduced visibility. Before you start, make certain your lights are clean and work properly. Drive at speeds that will allow you to stop in time when you see an unknown or dangerous object ahead. Stay on established trails and never operate in unfamiliar territory. Avoid rivers and lakes. Guy wires, barbed wire fences, cabled road entrances and other objects such as tree limbs are difficult to see at night. Never drive alone. Always carry a flashlight. Keep away from residential areas and respect the right of others to sleep.

**Riding in a Group**

Before starting out, designate a “trail boss” to lead the party and another person to follow-up at the end of the party. Ensure that all members of the party are aware of the proposed route and destination. Make certain that you are carrying all necessary tools and equipment and that you have sufficient fuel to complete the trip. Never overtake...
RIDING THE VEHICLE

the trail boss or, for that matter, any other snowmobile. Use down-the-line hand signals to indicate hazards or intent of direction change. Assist others whenever necessary.

It is always IMPORTANT to keep a safe distance between each snowmobile. Always maintain a safe interval and allow sufficient stopping distance. Don’t be a tailgater. Know the position of the machine ahead.

Signals
If you intend to stop, raise either hand straight above your head. A left turn is indicated by extending your left hand straight out in the proper direction. For right turns, extend the left arm and raise the hand to a vertical position so it forms a right angle at the elbow. Every snowmobiler should relay any signal to the ones behind.

Trail Stops
Whenever possible, pull off the trail when you stop. This will reduce the hazard to other snowmobilers using the trail.

Trails and Signs
Trail signs are used to control, direct or regulate the use of snowmobiles on trails. Become familiar with all signs used in the area where you are snowmobiling.

Environment
Wildlife compliments your snowmobiling day. Snowmobile tracks provide firm ground over which animals can travel from area to area. Do not violate this privilege by chasing or harassing wildlife. Fatigue and exhaustion can lead to animal’s death. Avoid areas posted for the protection or feeding of wildlife.

If you happen to be fortunate enough to see an animal, stop your snowmobile and observe quietly.

The guidelines that we support are not designed to limit your snowmobiling fun, but to preserve the beautiful freedom that you can experience only on a snowmobile! These guidelines will keep snowmobilers healthy, happy and able to introduce others to what they know and enjoy about their favorite winter pastime. So, the next time you hit the trails on a cool, crisp and clear winter day, we ask you to remember that you are paving the way for the future of our sport. Help us lead it down the right path! From all of us at BRP, thank you for doing your share.

There is nothing more exhilarating than snowmobiling. Venturing onto snowmobile trails that cross wild areas is an exciting and healthy winter sport. However, as the number of people using these recreational parks increases, so does the potential for damage to the environment. Abuse of land, facilities and resources inevitably leads to restrictions and closures of both private and public land.

In essence, the greatest threat to our sport, is all around us. Which leaves us with one logical choice. When we snowmobile, we must always ride responsibly.

The vast majority respect the law and the environment. Each of us must set an example for those who are new to the sport, young and old alike.

It is in every one’s best interest to tread lightly into our recreational areas. Because, in the long run, to protect the sport we must preserve the environment.

Recognizing the importance of this issue and the need for snowmobilers to do their share in preserving areas that make it possible to enjoy our sport, BRP has developed the “Light Treading Is Smart Sledding” campaign for snowmobilers.

Light Treading refers to more than the thread of our tracks. It’s a statement of concern, respect and willingness
to take the lead and take action. It applies to the environment in general, its proper care and maintenance, its natural inhabitants and all enthusiasts and the public at large who enjoy the great outdoors. With this theme, we invite all snowmobilers to remember that respecting the environment is not only critical to the future of our industry but to future generations.

Light Treading in no way suggests you should curb your appetite for snowmobiling fun! It simply means tread with respect!

The fundamental objective of Light Treading is one of respect for where and how you ride a snowmobile. You’re a light treader when you follow the principles below.

Become informed. Obtain maps, regulations and other information from the Forest Service or from other public land agencies. Learn the rules and follow them and that goes for speed limits, too!

Avoid running over young trees, shrubs, and grasses and don’t cut wood. On flatlands or areas where trail riding is popular, it’s important to ride only where authorized. Remember, there is a link between protecting your environment and your own safety.

Respect wildlife and be particularly sensitive of animals that are rearing young or suffering from food shortage. Stress can sap scarce energy reserves. Refrain from riding in areas where only animals are intended to tread!

Obey gate closures and regulatory signs and remember, light treads don’t litter!

Stay out of wilderness areas. They’re closed to all vehicles. Know where the boundaries are.

Obtain permission to travel across private land. Respect the rights of landowners and other people’s privacy. Remember, snowmobile technology has lowered the noise factor considerably, but you still shouldn’t rev your engines where quiet “is the order of the day”.

Snowmobilers know all too well the efforts that have been made throughout the sport’s history to enjoy access to areas where people can snowmobile safely and responsibly. This effort continues today, as strong as ever.

Respecting the areas where we ride... wherever they may be... is the only way to ensure their future enjoyment. That’s one major reason why we know you’ll agree that Light Treading is smart sledding! And there are more.

Enjoying the opportunity to see winter and all its natural majestic wonders, is an experience cherished by snowmobilers. Light Treading will preserve this opportunity and will make it possible for us to expose others to the beauty of winter and the unique thrill of our sport! Light Treading will help our sport to grow!

Finally, Light Treading is the sign of a smart snowmobiler. You don’t have to leave big tracks or careen through a virgin forest to show you can ride. So whether you’re driving a high performance Ski-Doo, a sporty MX Z™ snowmobile or any other make or model, show you know what you’re doing. Show you know how to send snow flying and make tracks with a light touch!
TRACTION ENHANCING PRODUCTS

NOTE: This section is applicable to snowmobiles equipped with a factory installed track that has been approved by BRP for special studs installation.

**WARNING**

Never stud a track that has not been approved for studs. Installing studs on an unapproved track could increase the risk of the track tearing or severing.

**WARNING**

You may stud the track on this vehicle model. However, you MUST only use the BRP approved type stud for use on these Ski-Doo snowmobiles. DO NOT EVER use conventional studs as the track thickness is thinner than other standard tracks. The stud could tear off of track and separate from vehicle. See an authorized Ski-Doo dealer for current specific studding availability and applications.

Using traction enhancing products such as, more aggressive ski carbide runners and/or studs on your snowmobile will change its behavior, particularly in terms of manoeuvrability, acceleration, and braking.

Using traction enhancing products gives a better grip on packed snow and ice, but has no noticeable effect on soft snow. For this reason, driving a snowmobile equipped with traction enhancing products requires a certain adaptation period. If your snowmobile is equipped with traction enhancing products, be sure to take plenty of time to get used to the way it handles when turning, accelerating, and braking.

Also, always check local regulations concerning the use of traction enhancing products on snowmobiles. Always drive your snowmobile in a responsible manner, respecting the environment and other people’s property.

**Manoeuvrability**

Using traction enhancing products such as, more aggressive ski carbide runners and/or studs makes the snowmobile grip the ground better at both the front and at the rear. The use of carbide runners is therefore required to give the skis a better grip, so that the front and rear of the snowmobile are in balance. While off-the-shelf carbide ski runners are adequate, they don’t necessarily give you optimal control, since that depends on your personal preferences, your riding style, and how your suspension is adjusted.

**WARNING**

If the front and rear of the snowmobile are out of balance due to an incorrect combination of traction enhancing products, the snowmobile may tend to oversteer or understeer, which could lead to a loss of control.

**Oversteering**

In certain conditions, using more aggressive ski carbide runners without studs on the rear track could make the snowmobile prone to oversteering, see illustration.
Understeering
In certain conditions, the use of studs on the track could make the snowmobile prone to understeering if the skis are not equipped with more aggressive ski carbide runners, see illustration.

**WARNING**
To prevent surprises that could lead to a loss of control of the snowmobile:
- Always go easy on the throttle.
- NEVER try to spin the track to make the rear of the snowmobile skid.
This could cause debris or ice to be thrown violently backwards, possibly injuring others nearby or on snowmobiles behind you.

Controlled Driving
A balanced combination of carbide ski runners and studs on the track ensures adequate control and better handling, see illustration.

**WARNING**
To prevent surprises that could lead to a loss of control of the snowmobile:
- Always go easy on the throttle.
- NEVER try to spin the track to make the rear of the snowmobile skid.
This could cause debris or ice to be thrown violently backwards, possibly injuring others nearby or on snowmobiles behind you.

Acceleration
Using studs on the track will allow your sled to accelerate better on packed snow and ice but will have no noticeable effect on soft snow. This can cause sudden variations in traction under certain conditions.

**WARNING**
To prevent surprises that could lead to a loss of control of the snowmobile:
- Always go easy on the throttle.
- NEVER try to spin the track to make the rear of the snowmobile skid.
This could cause debris or ice to be thrown violently backwards, possibly injuring others nearby or on snowmobiles behind you.

Braking
As in the case of acceleration, using studs on the track will give you better braking capacity on packed snow or ice but will have no noticeable effect on soft snow. Braking may thus vary suddenly under certain conditions. Be sure to use restraint in braking to keep from blocking the track in order to avoid surprises that could lead to a loss of control.

Important Safety Rules
**WARNING**
To prevent serious injury to individuals near the snowmobile:
- NEVER stand behind or near a moving track.
- Always use a wide-base snowmobile stand with a rear deflector panel if it is necessary to rotate track.
- When the track is raised off the ground, only run it at the lowest possible speed.
Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force.
Effects of Having a Studded Track on the Life of the Snowmobile

The use of traction enhancing products can increase the load and the stress on certain snowmobile components, as well as the vibration level. This can cause premature wear on parts such as belts, brake linings, bearings, chain, chaincase sprocket, and on approved studded tracks, shorten track life. Always proceed with a visual inspection of your track before each use. For more information, refer to the TRACK section in MAINTENANCE.

Studs on the track can also cause serious damage to your snowmobile if it is not equipped with the tunnel protectors designed for your particular model. Damage to the electrical wiring or perforation of the heat exchangers are potential hazards, that could cause the engine to overheat and be severely damaged.

**WARNING**

If tunnel protectors are excessively worn or not installed, the gas tank could be punctured, causing a fire.

**NOTICE** Ask your dealer for the appropriate tunnel protectors model and kit number required for your snowmobile.

**NOTE:** Consult the BRP limited warranty to find out what warranty limitations are related to the use of studs.

Installation of Studs on BRP Approved Tracks

**WARNING**

Never stud a track that has not been approved for studs. Approved tracks can be identified by a stud symbol (see illustration below) molded into the track surface. Installing studs on an unapproved track could increase the risk of the track tearing or severing.

**TRACK SYMBOLS**

1. Approved
2. NOT Approved

To ensure safe and proper installation, BRP recommends to have the studs installed by your dealer.
- Use only the BRP approved special studs.
- Never use studs that exceed the height of your snowmobile’s track profile by more than 9.5 mm (3/8 in).

**INSTALLATION OF STUDS**

1. Stud size
2. Penetration range 6.4 mm to 9.5 mm (1/4 in to 3/8 in)
3. Track lug height
4. Track belt thickness
TRACTION ENHANCING PRODUCTS

**WARNING**

- See an authorized Ski-Doo dealer for current specific studding availability and applications.
- Do not ever use conventional studs because the track thickness is thinner than our standard tracks and the stud could tear off of track and separate from vehicle.
- Studs should only be installed in the locations indicated by molded bulges in the track surface.
- Never stud a track with a profile of 35 mm (1-3/8 in) or more.
- The number of studs installed must always perfectly match the pattern of molded bulges in the track.
- Always consult the traction product manufacturer's installation instructions and recommendations before having your dealer install studs and runners. It is very important to follow the torque specifications for the stud bolts.

**INSTALLING AN INCORRECT NUMBER OF STUDS OR AN IMPROPER INSTALLATION CAN INCREASE THE RISK OF THE TRACK TEARING OR SEVERING.**

**Maintenance/Replacement**

PROCEED WITH A VISUAL INSPECTION OF YOUR TRACK BEFORE EACH USE.

Look for any defects, such as:

- Perforations in the track
- Tears in the track (particularly around traction holes on studded tracks)
- Lugs that are broken or torn off, exposing portions of rods
- Delamination of the rubber
- Broken rods

- Broken studs (studded tracks)
- Bent studs (studded tracks)
- Missing studs
- Studs that are torn off the track
- Missing track guide(s)
- Also, ensure that studs nut are tighten to the recommended torque.

On approved studded tracks, replace broken or damaged studs immediately. If your track shows signs of deterioration, it must be replaced immediately. When in doubt, ask your dealer. Always proceed with a visual inspection of your track before each use.

**WARNING**

Riding with a damaged track or studs could lead to loss of control.
IMPORTANT ON-PRODUCT LABELS

**Hang Tag(s)**

**VEHICLE ENGINE DESCRIPTION:**

```
XX...XX
EPA CERTIFIED
```

NER. (NORMALIZED EMISSION RATING) or X
ON A 0 TO 10 SCALE, 0 BEING THE CLEANEST
*NOT TO BE REMOVED PRIOR TO SALE

**Typical**

Dear consumer,

Your new E-TEC engine technology has an automatic computer-controlled break-in period that ensures you get the most performance, efficiency and reliability for the life of the engine. During this break-in, it will consume more oil and fuel than normal. Also, you may feel the engine shake. This is normal, the computer is protecting the engine components against premature wear and ensure optimal break-in. After this period, which lasts for about the first two tanks of fuel (2 gal. /8.8 L), you'll be able to experience the unmatched performance, fuel and oil economy that only the E-TEC technology delivers.

Cher client,

Votre nouveau moteur à technologie E-TEC a une période de redémarrage automatiquement qui assurera une performance, une efficacité et une fiabilité optimales à long terme. Durant la période de redémarrage, le moteur consomme plus d'huile et d'essence qu'à la normale. Ainsi, il se peut que le moteur soit des roulis. Cela est normal car le module de commande protège le moteur contre l'usure prématurée et assure un redémarrage optimal. Après cette période, qui dure environ 2 pleins d'essence (8.8 L), vous serez en mesure de profiter pleinement des performances, ainsi que de la faible consommation d'huile et d'essence, que seule la technologie E-TEC peut offrir.

**CAUTION**

This engine is calibrated for operation at altitudes between 3000 ft and 8000 ft. Operating above or below these altitudes requires calibration parts and adjustment. For more details, REFER to your Operator’s Guide that came with your unassembly or see your authorized Ski-Doo dealer. FAILURE TO RECALIBRATE MAY CAUSE SERIOUS ENGINE DAMAGE.
Vehicle Safety Labels
The following labels are on your vehicle and they should be considered permanent parts of the vehicle. If missing or damaged, the decals can be replaced free of charge. See an authorized Ski-Doo dealer.

NOTE: The following illustrations used in this Operator’s Guide are a general representation only. Your model may differ.
If you studd the track on this vehicle use special BRP approved studs ONLY. Studding this track with conventional studs may cause studs to tear off of track and separate from vehicle posing a potential risk of severe injury or death. See the Operator's Guide that came with this vehicle for all details pertaining to track studding.
IMPORTANT ON-PRODUCT LABELS

**WARNING**

- Read and understand all safety labels.
- Operator's guide is located either in the passenger seat or under the driver's seat. To access guide under driver's seat, pull front of seat cushion then pull tab to unlock seat (if applicable, passenger's seat needs to be removed first).
- Get familiar with your vehicle. Unfamiliar riders may overlook risks and be surprised by vehicle's specific behavior and terrain conditions/hills쇼일.
- Excessive speed and roadless driving can kill.
- Do NOT adjust your speed according to adverse conditions and circumstances.
- Steep, wooded, and hilly areas may be adversely affected by hard pack snow, ice, or roads.
- Reduce speed & allow more space to stop or turn.
- Respect laws on minimum operating age. Manufacturer recommends a minimum operating age of 16 years old.
- Never ride on a parked or stand alone engine running if vehicle is in motion. (This can be removed DETACH key before opening doors. **BEFORE STARTING**)
  1. Attach tether cord to your clothing.
  2. Check proper operation of the throttle and emergency engine stop switch.
  3. They must return to their initial position when released.
  4. Apply parking brake.
  5. Turn handles in both directions to check pinch area and ensure free operation.
- **AFTER STARTING**
  1. Pull out tether cord to check parking switch.
  2. Re-attach and push in the emergency engine stop switch to check if engine shuts off.
  3. Operate parking brake before riding to avoid brake listing.

**WARNING**

This vehicle is designed for one (1) operator and as many passengers as there are seats with shape or handlebars installed on the vehicle conforming to SSGC standards.

When riding with a passenger:
- Braking ability and steering control are reduced. Decrease speed and allow extra space to maneuver.
- Adjust suspension according to weight.
- **REMEMBER - YOU ARE RESPONSIBLE FOR THE SAFETY OF YOUR PASSENGER**

**SAFETY INFORMATION**
**WARNING**

Towing a load may affect handling of your snowmobile. • Reduce speed. • Use rigid tow bar. • Ensure that the tow bar is securely fastened. Do not exceed the following loads:

**TOWING WEIGHT** 250Kg / 562 lbs Max.    **VERTICAL LOAD** 10Kg / 23 lbs Max.

LABEL 5 - NEAR DRIVE PULLEY - 800R E-TEC
This page is intentionally blank
VEHICLE INFORMATION
NOTE: Some features may not apply to your model or could be optional.
1) Handlebar
The handlebar controls the steering of the snowmobile. As the handlebar is rotated to right or left, the skis are turned right or left to steer the snowmobile.

**WARNING**
Fast reverse while turning, could result in loss of stability and control.

2) Throttle Lever
Throttle lever is located on the RH side of handlebar.
Designed to be thumb activated. When squeezed, it increases the engine speed. When released, engine speed returns automatically to idle.

**WARNING**
Test the throttle lever operation each time before starting the engine. The lever must return to the rest position once released. Otherwise, do not start engine.

3) Brake Lever
Brake lever is located on the LH side of handlebar.
When squeezed, brake is applied. When released, it automatically returns to the rest. Braking effect is proportional to the pressure applied on the lever and to the type of terrain and its snow coverage.
**CONTROLS, INSTRUMENTS AND EQUIPMENT**

1. **Brake lever**
2. **To apply brake**

4) **Parking Brake Lever**

Parking brake lever is located on the LH side of handlebar.

Parking brake should be used whenever snowmobile is parked.

**WARNING**

Make sure parking brake is fully disengaged before operating the snowmobile. When you ride the vehicle, brake pads that are caused to drag by a continuous pressure on the lever may cause damage to the brake system and cause loss of braking capacity and/or fire.

**To Engage Parking Brake**

Apply and hold brake, then lock brake lever using the parking brake lever as shown.

**To Release Parking Brake**

Squeeze brake lever. Parking brake lever will automatically return to its original position. Always release parking brake before riding.

5) **Engine Cut-off Switch**

The engine cut-off switch (tether cord) is located on the LH side of console. The tether cord cap must be securely snapped on the engine cut-off switch to allow vehicle operation.

**NOTE:** After engine starting, 2 short beeps should be heard if a programmed D.E.S.S. key (tether cord cap) is correctly snapped on engine cut-off switch. If another beep code is heard, refer to **MONITORING SYSTEM** for D.E.S.S. malfunction codes information.

Pulling the tether cord cap from the switch shuts the engine off.
Always attach the tether cord eyelet to clothing before starting the engine.

D.E.S.S. (Digitally Encoded Security System)

The tether cord cap has an integrated D.E.S.S. key to provide you and your snowmobile with the equivalent security of a conventional lock key.

The D.E.S.S. key contains an electronic chip which features a unique permanently memorized digital code.

Your authorized Ski-Doo dealer has programmed the D.E.S.S. of your snowmobile to recognize the D.E.S.S. key in the tether cord cap to allow vehicle operation.

If another tether cord is used without programming the D.E.S.S., the engine will start but will not reach drive pulley engagement speed to move vehicle.

Make sure the tether cord cap is free of dirt or snow.

We recommend the purchase of additional tether cords from your authorized Ski-Doo dealer. If you have more than one D.E.S.S. equipped Ski-Doo snowmobile, each can be programmed by your authorized Ski-Doo dealer to accept the other vehicles D.E.S.S. keys.

6) Emergency Engine Stop Switch

The emergency engine stop switch is located on the RH side of handlebar. Push-pull type switch.

To stop the engine in an emergency, select OFF position (down) and simultaneously apply the brake. To restart, button must be at the ON position (up).

OFF POSITION

To allow engine starting, the switch must be in the ON position (UP).

ON POSITION

All operators of the snowmobile should familiarize themselves with the function of the emergency engine stop switch by using it several times on first
outing and whenever stopping the engine thereafter. This engine stopping procedure will become a reflex and will prepare operators for emergency situations requiring its use.

**WARNING**
If the switch has been used in an emergency caused by a suspected malfunction, the source of the malfunction should be determined and corrected before restarting engine. See an authorized Ski-Doo dealer for servicing.

**7) Choke Lever**

*600 and 800R Power TEK Engines Only*

The choke lever has 3-positions.

1. OFF
2. Position 2
3. Position 3

See proper usage instructions in **BASIC PROCEDURES** section.

**8) Multifunction Switch**

*(except MX Z X-RS™ and Freeride™)*

Multifunction switch is located on the LH side of handlebar.

**Start/Electronic Reverse Button**

On electric start models, press to start engine. Refer to **ENGINE STARTING PROCEDURE** in the **BASIC PROCEDURES** subsection.

Once engine is started, press to engage the electronic reverse. Refer to **REVERSE (RER)** in **BASIC PROCEDURES** section for procedure.

**Headlights Dimmer Switch**

Press to select HI or LOW beam. Lights are automatically ON when the engine is running.

**Heated Grips Switch**

*Models with Analog/Digital Gauge*

NOTE: On E-TEC models, heated grips are enabled above 2000 engine RPM.

Select the switch position according to the desired heating intensity to keep your hands at a comfortable temperature.
CONTROLS, INSTRUMENTS AND EQUIPMENT

TYPICAL
1. Heated grip switch
2. Hot
3. Warm
4. Off

Models with Multifunction Analog/Digital Gauge

NOTE: Heated grips are enabled above 2000 engine RPM.

Depress switch as required to select heating intensity to keep your hands at a comfortable temperature.

VARIABLE INTENSITY
1. Heated grip switch
2. Increase heat
3. Decrease heat

The heating intensity is displayed via the multifunction display.

Heated grips will be in OFF position when there are no bars displayed on the gauge.

Heated Throttle Lever Switch

Models with Analog/Digital Gauge

NOTE: On E-TEC models, heated grips are enabled above 2000 engine RPM.

Select the switch position according to the desired heating intensity to keep your thumb at a comfortable temperature.

Models with Multifunction Analog/Digital Gauge

NOTE: Heated grips are enabled above 2000 engine RPM.
Depress switch as required to select heating intensity to keep your thumb at a comfortable temperature.

**VARIABLE INTENSITY**
1. Heated throttle lever switch
2. Increase heat
3. Decrease heat

**NOTE:** The heating intensity is displayed via the multifunction display with the activation of the throttle lever switch. When released, display will return to fuel tank level.

**Mode/Set Button**

**Models with Multifunction Analog/Digital Gauge**
This button can be used instead of the two buttons on top of the analog/digital gauge to facilitate gauge adjustments.
- When pressed upward, it has the same functions as the MODE (M) button.
- When pressed downward, it has the same functions as the SET (S) button.

**MULTIFUNCTION GAUGE**
1. MODE function
2. SET function

**9) Rewind Starter Handle**
Auto-rewind type located on right hand side of snowmobile. To engage mechanism, pull handle slowly until a resistance is felt then pull vigorously. Slowly release handle.

**10) Heated Carburetor Valve (600 and 800R Power TEK)**
The heated carburetor valve should be closed except:
- When riding between -5°C and 5°C (23°F and 41°F) in a high relative humidity environment.
- When riding in deep powder snow.
- When following another snowmobile in high snow conditions.
CONTROLS, INSTRUMENTS AND EQUIPMENT

1. Carburetor valve

NOTICE When operating the snowmobile above 5°C (41°F), move the carburetor heating valve to the OFF position.

11) Adjustable Mirrors
Each mirror can be adjusted to suit operator’s preference.

WARNING
Adjust with vehicle at rest in a safe place.

12) Seat Latch
All Models except Grand Touring
Seat can be removed to access to the Operator’s Guide (located in seat base) or for maintenance purposes.
Seat latch is located at the front of the seat.

Seat Removal
To access Operator’s Guide under seat, pull front of seat cushion, firmly push seat forward to unload latch, then pull tab to unlock seat.

1. Seat latch

Pull and hold seat latch, then, pull seat with a rearward movement.

Step 1: Pull and hold seat latch
Step 2: Pull seat with a rearward movement
Seat Installation

**NOTICE** Riding the vehicle with any objects between the seat and the fuel tank could damage the fuel tank. NEVER place any objects between seat and fuel tank.

Position seat in place.
Push seat forward until it latch in its position.

Step 1: Position seat in place
Step 2: Push seat forward until it latch

**NOTE:** A distinctive snap will be felt. Double check that the seat is secure by giving it a tug to confirm proper latching.

13) Tool Kit

A tool kit containing tools for basic maintenance is supplied with the vehicle.

The tool kit support is located in engine compartment on pulley guard.

**NOTICE** Make sure tool kit is secured properly to avoid contact with CVT (continuously variable transmission).

To remove the tool kit support from the pulley guard, unlock the tab from underneath the pulley guard and pull the tool kit support towards front to release it.

14) Front and Rear Bumpers

To be used whenever snowmobile requires manual lifting.

**CAUTION** Beware of injuries by using proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits. Use appropriate lifting device or have assistance to share lifting stress if possible.
Gauge Description

ANALOG/DIGITAL GAUGE (STANDARD)
1. Speedometer
2. Tachometer (RPM)
3. Gauge Digital Display
4. Pilot Lamps
5. Gauge SET “S” button

NOTE: The gauge is factory preset in Imperial units but it is possible to change it to metric units, contact an authorized Ski-Doo dealer for unit settings.

1) Speedometer
Measures vehicle speed (in miles per hour or kilometers per hour depending on the setting).

2) Tachometer (RPM)
Measures engine revolution per minute (RPM). Multiply by 1000 to obtain the actual revolutions.

WARNING
Reading the gauge digital display can distract from the operation of the vehicle, particularly from constantly scanning the environment.

NOTICE
Do not use skis to pull or lift snowmobile.
3) Digital Display

The multifunction display is used to:
- Display the WELCOME message on power up
- Display the KEY recognition message
- Provide various indications as selected by the operator
- Activating or changing various functions or modes of operation
- Display scrolling messages of function activation or system faults
- Display fault codes.

**WARNING**

Never adjust or set functions on the multifunction gauge while riding the vehicle.

4) Pilot Lamps and Messages

See table below for usual pilot lamps information. Refer to *MONITORING SYSTEM* for details on malfunction pilot lamps.
### PILOT LAMP(S) ON

<table>

X = An X indicates a standard feature
Opt = Feature available as an option
N.A. = Not available

(1) Coolant temperature is an option package. See a Ski-Doo dealer for more information.

NOTE: The display is factory preset in Imperial units but it is possible to change it to Metric units, contact an authorized Ski-Doo dealer for unit settings.

A) Odometer
Records the total distance travelled.
Press the SET (S) button to select odometer mode.

B) Trip Meter A or B
Trip meters records distance travelled since it has been reset.

Press the SET (S) button to select trip meter (TRIP A/TRIP B) mode.

Press and hold the SET (S) button to reset.
C) Trip Hour Meter
Records vehicle running time when the electrical system is activated since it has been reset.
Press the SET (S) button to select trip hour meter (HrTRIP) mode.

D) Fuel Level
Bar gauge that continuously indicates the amount of fuel left in the fuel tank.

FUEL LEVEL
1. Operating range
Engine Coolant Temperature (Optional Module)
Overheating indicator.

NOTICE If engine overheats, stop vehicle in a safe place. Refer to TROUBLESHOOTING section.

OPTIONAL MODULE INSTALLED
1. Overheating indicator

F) E-TEC Engine Storage Mode
Displays "OIL" when the engine enters the storage procedure.

16) Multifunction Analog/Digital Gauge

WARNING Reading the gauge digital display can distract from the operation of the vehicle, particularly from constantly scanning the environment.
Gauge Description

MULTIFUNCTION ANALOG/DIGITAL GAUGE
1. Speedometer
2. Tachometer
3. Multifunction digital display
4. Pilot lamps
5. Mode button
6. Set button

NOTE: The gauge is factory preset in Imperial units but it is possible to change it to metric units, contact an authorized Ski-Doo dealer for unit settings.

1) Speedometer
Measures vehicle speed.

2) Tachometer (RPM)
Measures engine revolution per minute (RPM). Multiply by 1000 to obtain the actual revolutions.

The multifunction display is used to:
- Display the WELCOME message on power up
- Display the KEY recognition message
- Provide various indications as selected by the operator
- Activating or changing various functions or modes of operation
- Display scrolling messages of function activation or system faults
- Display fault codes.

When the information center is first powered up, the numerical display defaults to the last selected indication.

WARNING
Never adjust or set functions on the multifunction gauge while riding the vehicle.
4) Pilot Lamps and Messages

See table below for usual pilot lamps information. Refer to MONITORING SYSTEM for details on malfunction pilot lamps.

<table>

X = An X indicates a standard feature  
Opt = Feature available as an option  
N.A. = Not available

(1) Feature is not available on MX Z X-RS, Freeride and Summit X  
(2) Temperature, compass and lap record functions may be easily added to your vehicle through the purchase of a specific module. Contact your Ski-Doo dealer for additional information.  
(3) Lap record mode comes installed on MX Z X-RS and Freeride models.
A) Speedometer
In addition of the analog type speedometer, vehicle speed can also be displayed via the multifunction display.
Vehicle speed can be displayed on display 1 or display 2.

Press the MODE (M) button to confirm selection or wait 5 seconds.

B) Tachometer (RPM)
In addition of the analog type tachometer, RPM can also be displayed via the multifunction display.
Engine RPM can be displayed on display 1 or display 2.

While display is flashing, press SET (S) button to select RPM mode.
CONTROLS, INSTRUMENTS AND EQUIPMENT

1. RPM mode
Press the MODE (M) button to confirm selection or wait 5 seconds.

C) Odometer
Records the total distance travelled.
Press the SET (S) button to select odometer mode.

D) Trip Meter A or B
Trip meters records distance travelled since it has been reset.
Press the SET (S) button to select trip meter (TRIP A/TRIP B) mode.

E) Trip Hour Meter
Records vehicle running time when the electrical system is activated since it has been reset.
Press the SET (S) button to select trip hour meter (HrTRIP) mode.

NOTE: On E-TEC models, resetting TRIP B mode will also reset TOTAL FUEL CONSUMPTION.
F) Clock

*Electric Start Models*

**NOTE:** This clock displays hour in the 24-hour format only.

Press the SET (S) button to select clock mode.

To change **HOURS**, while the value of **HOURS** is blinking, use the SET (S) button to change hours.

To change **MINUTES**, while the value of **HOURS** is blinking, press the MODE (M) button to switch to minutes. Use the SET (S) button to change minutes. Press the MODE (M) button to save clock set-up and exit mode.

**G) Fuel Level**

Bar gauge that continuously indicates the amount of fuel left in the fuel tank.

**H) Altitude**

Displays vehicle **approximate** altitude above sea level calculated from the barometric pressure.

**NOTE:** Altitude displayed is rounded off every 100 meters when set in metric units or 200 feet when set in imperial units.

To display vehicle altitude, proceed as follows.

Press the MODE (M) button to select display 2.
While display is flashing, press the SET (S) button to select altitude mode.

The following symbol appears when altitude mode is selected.

**ALTITUDE MODE**

Press the MODE (M) button to confirm selection or wait 5 seconds.

1) **Top Speed**
Records vehicle top speed since it has been reset.
To display vehicle top speed, proceed as follows.
Press the MODE (M) button to select display 1.

While display flashes, press the SET (S) button to select top speed (TOP_SPD) mode.

Press the MODE (M) button to confirm selection or wait 5 seconds.

To reset, press the MODE (M) to select mode.
While display flashes, press and hold the SET (S) button within 5 seconds to reset.

J) Average Speed
Records vehicle average speed since it has been reset.

To display vehicle average speed, proceed as follows.

Press the MODE (M) button to select display 1.

While display flashes, press SET (S) button to select vehicle average speed (AVR SPD) mode.

While display flashes, press and hold the SET (S) button within 5 seconds to reset.
K) Heated Grips Heating Intensity
Bar gauge that indicates heating intensity.
Refer to HEATED GRIPS SWITCH for more details.

L) Heated Throttle Lever Heating Intensity
Bar gauge that indicates heating intensity.
Bar gauge will be displayed instead of the fuel level with the activation of the heated throttle lever switch. When released, display will return to fuel level.
Refer to HEATED THROTTLE LEVER SWITCH for more details.

M) Instant Fuel Consumption
Calculates vehicle average fuel consumption while riding.
To display vehicle average fuel consumption, proceed as follows.
Press the MODE (M) button to select display 1.
While display flashes, press SET (S) button to select instant fuel consumption mode.
Press the MODE (M) button to confirm selection or wait 5 seconds.

TC appears when the mode is selected.

N) Total Fuel Consumption
Records vehicle average fuel consumption since it has been reset.
To display vehicle total fuel consumption, proceed as follows.
Press the MODE (M) button to select display.

While display flashes, press the SET (S) button to select total fuel consumption (TC) mode.

To reset, set the trip meter to TRIP B. Refer to TRIP METER A OR B for more details.

Press and hold the SET (S) button to reset.
O) Message Display

Refer to PILOT LAMPS AND MESSAGES in this section for details on usual messages.

Refer to MONITORING SYSTEM for details on malfunction and D.E.S.S. related messages.

P) Engine Coolant Temperature

Bar gauge that indicates the engine coolant temperature.

During normal operation, the bars should not exceed approximately the middle of the gauge.

**NOTICE** If engine overheats, stop vehicle in a safe place. Refer to TROUBLESHOOTING section.

Q) Lap Record Mode

With this mode, vehicle speed, engine revolutions per minute (RPM) and a preselected function in display 1 can be recorded at the same time during a period of time defined by the operator.

Also, a possibility of nine (9) different sessions (laps) can be recorded for a maximum total of 2.5 minutes.

**LAP RECORD MODE**

1. Lap record mode display
2. Sessions (laps)
3. Vehicle speed
4. Engine revolution per minute (RPM)
5. Preselected function

To Activate Lap Record Mode:

1. Press the SET (S) button to select the odometer mode in display 3.
2. Press and hold SET (S) button for 2 seconds to activate mode, REC will be displayed to indicate that record mode has been selected.
1. Record mode
2. Odometer

3. Press the SET (S) button to scroll between modes.

Available modes are: STOP, REC (record) or PLAY.

To Record:
1. Select REC (record) mode.

RECORD MODE
1. Recording time
2. Lap/session
3. Selected mode

To record another session, press the SET (S) button until REC (record) mode appears in display. Repeat same procedure previously described to record.

To Review Recorded Data:
Select PLAY mode.

PLAY MODE
1. Press the MODE (M) button to play recorded data.

All recorded data (speedometer, tachometer and the preselected mode in display 1) will be displayed at the same time.

2. Press the SET (S) button to stop recorded lap OR press the MODE (M) button to switch to another recorded lap.

NOTE: Pressing the SET (S) button will stop time of the lap in progress, then the display will show the recorded time length of that lap and will switch automatically to the following recorded lap after 5 seconds.
CONTROLS, INSTRUMENTS AND EQUIPMENT

At the end of all recorded laps, STOP will appear in display.

To review recorded data again, press the SET (S) button to return to PLAY mode. Repeat same procedure previously described to review.

To record other laps, press the SET (S) button to switch to REC (record) mode. Repeat same procedure previously described to record.

Press and hold SET (S) button for 5 seconds to exit the lap record mode, the previously selected mode will be displayed.

R) Air Control Suspension
Displays rear suspension air shock absorber set point and actual setting.

S) E-TEC Engine Storage Mode
Displays “OIL” when the storage mode procedure is initiated.

Gauge Setup

Clock Setting
NOTE: This clock displays in the 24-hour format only.
Press the SET (S) button to select clock mode.

Press and hold the SET (S) button to activate clock set-up.

To change HOURS, while the value of HOURS is blinking, use the SET (S) button to change hours.
To change MINUTES, while the value of HOURS is blinking, press the MODE (M) button to switch to minutes. Use the SET (S) button to change minutes.
Press the MODE (M) button to save clock set-up and exit mode.

Unit Selection (KM/H vs MPH)
The units can be set in metric or imperial. Refer to an authorized Ski-Doo dealer.

Language Selection
Language can be set in English or French. Refer to an authorized Ski-Doo dealer.

17) Mountain Strap

Summit and Renegade Backcountry Models
Mountain strap provides a grip for operator when side-hilling.

WARNING
This strap is not for towing, lifting or other purpose than temporary use as a grab handle during side-hilling. Always keep at least one hand on handlebar.
18) Storage Compartment

**WARNING**

All storage compartments must be securely closed and must not contain any sharp, heavy or breakable objects.

**All Models Except Grand Touring and X Package**

**NOTICE** MAXIMUM load is 1.8 kg (4 lb) evenly distributed.

Pull latch slightly upward then, backward to unlock cover.

**Grand Touring**

The storage compartment is located at rear of the rear seat.

The Operator’s Guide is in the storage compartment.

Simply open and close using the zipper.

19) Rear Rack

**Grand Touring Only**

**WARNING**

All objects in rear rack must be properly latched. Do not carry any breakable objects. Load in rack may reduce steering ability. Always readjust suspension according to the load. The capacity of this rack is limited, the MAXIMUM cargo load is 15.8 kg (35 lb). Reduce your speed while carrying a load.

20) Tunnel Bag

**GSX LE Only**

**WARNING**

Tunnel bag must be properly latched and must not contain any sharp, heavy or breakable objects.

**CAUTION** MAXIMUM load for this bag is 1.4 kg (3 lb) evenly distributed.

The tunnel bag is secured to the tunnel by straps and anchors. To install, hook the straps plastic ends to the anchors and adjust the straps.

To remove the tunnel bag, push the straps plastic ends down to unhook from anchors.
CONTROLS, INSTRUMENTS AND EQUIPMENT

21) Passenger Seat

Grand Touring Only

A fixed passenger seat with backrest.

**WARNING**

Any passenger must be able to firmly lay is feet on the footrests and keep his hands on the handholds at all times when seated. Respecting those physical criteria is important to ensure that the passenger is stable and to reduce the risks of ejection.

22) Passenger Handholds

Grand Touring Only

Rear handholds provides a grip for the passenger.

23) Rear Passenger Heated Grip Switch

Grand Touring Only

Three-position switch. Select the desired position to keep rear passenger’s hands at a comfortable temperature.

24) Electric Visor Jack Connector

Grand Touring and GSX Only

An electric visor can be connected to the jack connector. Electric current is supplied whenever engine is running. A stress relief extension is supplied with the vehicle.

25) 12-Volt Power Outlet

GSX LE Only

A 12-volt electric appliance may be connected to that jack connector. Electric current is supplied whenever engine is running.

26) Hitch (Europe only)

Use this hitch in conjunction with a tow bar to tow an accessory.

**NOTE:** Refer to decal on vehicle for towing weight capacities.

**WARNING**

Never tow an accessory with a rope. Always use a rigid tow bar. Using a rope would result in a collision between the object and the snowmobile and possibly in a tip over in case of a rapid deceleration or on a downward slope.
How to Use the Hitch

Detach hitch from its support by removing the hairpin.

Remove rod from hitch then attach rigid tow bar to hitch using the same rod.

Secure rod to hitch using hairpin previously removed.

**NOTICE** To avoid damages to the vehicle, always release hitch from its support. Ensure hitch moves freely when towing accessories.

To avoid noise from hitch when not in use, secure hitch to its support by using the hairpin.
27) Start/RER Switch (MX Z X-RS and Freeride)

Start/RER switch is located on the LH side of handlebar.

On electric start models, press to start engine. Refer to ENGINE STARTING PROCEDURE in the BASIC PROCEDURES subsection.

Once the engine is started, press to engage the electronic reverse. Refer to REVERSE (RER) in BASIC PROCEDURES section for procedure.

28) Headlights Dimmer Switch (MX Z X-RS and Freeride)

Headlights dimmer switch is located on the LH side of handlebar.

Use to select high beam or low beam.

29) Heated Throttle Lever and Grips Switch (MX Z X-RS and Freeride)

NOTE: On E-TEC models, heated throttle lever and grips are enabled above 2000 engine RPM.

The heated grips and throttle lever switch is located on the RH side of console.

Select the switch position according to the desired heating intensity.
30) Drive Belt Guard

Drive Belt Guard Removal

**WARNING**

NEVER operate engine:
- Without shields and belt guard securely installed.
- With hood and/or side panels opened or removed.
NEVER attempt to make adjustments to moving parts while engine is running.

NOTE: Belt guard is purposely made slightly oversize to maintain tension on its pins and retainers preventing undue noise and vibration. It is important that this tension be maintained when reinstalling.

Remove tether cord cap from engine cut-off switch.

Open engine compartment LH side panel.

Remove retaining pin.

Lift rear portion of guard then release from front tabs by pivoting the guard outwards.

**Drive Belt Guard Installation**

When reinstalling belt guard, position its cutaway toward front of snowmobile.

Place the front LH slot of the guard over the longest tab.

Pivot the guard inward to engage the shortest tab in the RH slot.
31) Spare Drive Belt Holder

Single Air Intake Models
A spare drive belt can be stored in holder.

NOTE: Spare drive belt is not supplied with the snowmobile.
Properly install spare belt and secure with Velcro strap as shown.

NOTICE To avoid damages to the drive belt, ensure that belt does not come in contact with tuned pipe when installed in its support.

Dual Air Intake Models
A spare drive belt can be stored in its holder.

NOTE: The spare drive belt is not supplied with the snowmobile.
Install the spare drive belt as shown.

Make sure drive belt holder is properly installed to the vehicle.
- Insert the upper fastening tab (underneath top of holder), into the RH secondary air intake silencer screw recess.
- Put the holder slots over the bottom pan cover tabs.
1. Upper fastening tab (underneath)
2. Slots over the bottom pan cover tabs

**Summit Models**

A spare drive belt can be stored in its holder located on the drive belt guard.

**NOTE:** The spare drive belt is not supplied with the snowmobile.

Position spare drive belt into drive belt guard slot.

Secure in place by sliding it into the fastener tabs.

---

**33) Side Panels**

To open a side panel, stretch and unhook the latches.

To remove a side panel, open it then lift it up. Free the lower hinge from its slot, then free the upper hinge by lowering the panel.

**WARNING**

Never operate engine with side panels opened or removed from vehicle.

---

**32) Hood**

To open hood, release hood retaining pins then slide hood towards the front of the vehicle.

**WARNING**

Never operate engine with hood removed from vehicle.
FUEL

Recommended Fuel
Use unleaded gasoline available from most service stations or oxygenated fuel containing a maximum total of 10% of ethanol or methanol. The gasoline used must have the following recommended minimum octane rating.

<table>
<thead>
<tr>
<th>MINIMUM OCTANE RATING (NORTH AMERICA)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGINES</td>
</tr>
<tr>
<td>600</td>
</tr>
<tr>
<td>600 HO E-TEC</td>
</tr>
<tr>
<td>800R E-TEC</td>
</tr>
<tr>
<td>800R Power TEK</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>MINIMUM OCTANE RATING (OUTSIDE NORTH AMERICA)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGINES</td>
</tr>
<tr>
<td>600</td>
</tr>
<tr>
<td>600 HO E-TEC</td>
</tr>
<tr>
<td>800R E-TEC</td>
</tr>
<tr>
<td>800R Power TEK</td>
</tr>
</tbody>
</table>

NOTICE Never experiment with other fuels. The use of inadequate fuel can result in snowmobile performance deterioration and damage to critical parts in the fuel system and engine components. Do not mistake oil reservoir cap for fuel tank cap. Oil reservoir cap is identified OIL.

Fuel Antifreeze Additives
When using oxygenated fuel, additional gas line antifreeze or water absorbing additives are not required and should be not used.

When using non-oxygenated fuel, we highly recommend the use of isopropyl base gas line antifreeze in a proportion of 150 ml (5 U.S. oz) of gas line antifreeze added to 40 L (10.6 U.S. gal.) of gas.
This precaution is in order to reduce the risk of frost buildup in carburetors or other fuel system components which may lead, in certain cases, to severe damage to engine.

NOTE: Use only methyl hydrate free gas line antifreeze.

Vehicle Fueling Procedure

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel is flammable and explosive under certain conditions.</td>
</tr>
<tr>
<td>Never use an open flame to check fuel level.</td>
</tr>
<tr>
<td>Never smoke or allow flame or spark in vicinity.</td>
</tr>
<tr>
<td>Always work in a well-ventilated area.</td>
</tr>
</tbody>
</table>

1. Stop engine.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always stop engine before refueling.</td>
</tr>
</tbody>
</table>

2. Have operator and passenger get off vehicle.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not allow anyone seated on the vehicle while fueling.</td>
</tr>
</tbody>
</table>

3. Unscrew slowly the fuel reservoir cap counterclockwise to remove it.
1. Fuel tank cap

**WARNING**
If a differential pressure condition is noticed (whistling sound heard when loosening fuel reservoir cap) have vehicle inspected and/or repaired before further operation.

4. Insert the spout into the filler neck.
5. Pour fuel slowly so that air can escape from the tank and prevent fuel flow back. Be careful not to spill fuel.
6. Stop filling when the fuel reaches the bottom of filler neck. **Do not overfill.**

**WARNING**
Never top up the fuel tank before placing the vehicle in a warm area. As temperature increases, fuel expands and may overflow.

7. Fully tighten fuel reservoir cap clockwise.

**WARNING**
Always wipe off any fuel spillage from the vehicle.

**NOTE:** Do not sit or lean on seat when fuel tank cap is not properly installed.
INJECTION OIL

Recommended Injection Oil

<table>
<thead>
<tr>
<th>ENGINES</th>
<th>XPS SYNTHETIC BLEND 2-STROKE OIL (P/N 293 600 100)</th>
<th>XPS SYNTHETIC 2-STROKE OIL (P/N 293 600 132)</th>

</tr>
<tr>
<td>800R E-TEC</td>
<td>✓</td>
<td>✓</td>
</tr>
</tbody>
</table>

**NOTICE** The engine of this snowmobile has been developed and validated using the recommended BRP XPS™ oil. BRP strongly recommends the use of its recommended XPS oil at all times. Damages caused by oil which is not suitable for the engine will not be covered by the BRP limited warranty.

Injection Oil Level Verification

The injection oil reservoir is located behind the RH side panel. See CONTROLS, INSTRUMENTS AND EQUIPMENT for opening procedure.

Always maintain a sufficient amount of recommended injection oil in the injection oil reservoir.

To Add Injection Oil

Remove injection oil reservoir cap.
Add injection oil. Do not overfill.
Reinstall cap and fully tighten.

**NOTICE** Do not mismatch oil reservoir cap with fuel tank cap.

**WARNING** Wipe off any oil spills. Oil is highly flammable when heated.

**NOTICE** Check level and refill every time you refuel.
BREAK-IN PERIOD

Operation During Break-In
A break-in period of 10 operating hours or 500 km (300 mi) is required for the vehicle.

After the break-in period, the vehicle should be inspected by an authorized Ski-Doo dealer. Refer to MAINTENANCE section.

Engine
During the break-in period:
- Avoid prolonged full throttle operation.
- Avoid sustained accelerations.
- Avoid prolonged cruising speeds.
- Avoid engine overheating.

However, brief accelerations and speed variations contribute to a good break-in.

During the first few hours of break-in, the engine management system controls some engine parameters which will slightly reduce the engine performance.

E-TEC Models
During a predetermined period, the engine management system controls some engine parameters.

The duration is based on fuel volume. It will take approximately two fuel tanks to complete the break-in.

During this period:
- The engine performance and behavior will not be optimal.
- The fuel and oil consumption will be higher.

Drive Belt
A new drive belt requires a break in period of 50 km (30 mi).

During the break-in period:
- Avoid strong acceleration and deceleration.
- Avoid pulling a load.
- Avoid high speed cruising.
**BASIC PROCEDURES**

**Engine Starting Procedure (600 and 800R Power TEK)**

**Procedure**
1. Apply parking brake.
2. Recheck throttle control lever operation.
3. Put your helmet on.
4. Ensure that the tether cord cap is installed on the engine cut-off switch and that the cord attached to your clothing eyelet.
5. Ensure that the emergency engine stop switch is in the ON position (up).
6. Activate the choke according to the temperature. Refer to **CHOKE APPLICATION** further.
7. Start engine as explained below.

**WARNING**
Never depress throttle while starting engine.

8. Release parking brake.

**NOTE:** For an initial cold start, do not release parking brake. Perform the **VEHICLE WARM-UP** procedure as explained below.

**Manual Start**
Grab rewind starter handle, pull handle slowly until a resistance is felt, then hold handle firmly and pull vigorously to start engine.

**Electric Start**
Depress the START/RER button to engage the electric starter and start the engine. Release button immediately when engine has started.

**NOTE:** If for any reason, the engine cannot be started electrically, start engine manually using the rewind starter.

---

**Choke Application (600 and 800R Power TEK)**

**Initial Cold Starting When Temperature is Below -10°C (14°F)**

**NOTE:** Do not operate the throttle lever with the choke lever on.
Set the choke lever to position 3.
**NOTE:** After the engine is started, let engine warm up at fast idle until engine speed drops. Then, close off choke to ensure proper air-fuel mixture.

**Warm Engine Starting**
Start the engine without any choke. If the engine will not start after two pulls of the rope or two 5 second attempts with the electric starter move choke lever to position 2. Start the engine without activating the throttle lever. As soon as the engine starts move the choke lever to OFF.
Engine Starting Procedure (E-TEC)

Procedure
1. Apply parking brake.
2. Recheck throttle control lever operation.
3. Put your helmet on.
4. Ensure that the tether cord cap is installed on the engine cut-off switch and that the cord is attached to your clothing eyelet.
5. Ensure that the emergency engine stop switch is in the ON position (up).
6. Start engine as explained below.

7. Release parking brake.

NOTE: For an initial cold start, do not release parking brake. Perform the VEHICLE WARM-UP procedure as explained below.

Manual Start Models
Grab rewind starter handle, pull handle slowly until a resistance is felt, then hold handle firmly and pull vigorously to start engine.

Electric Start
Depress the START/RER button to engage the electric starter and start the engine. Release button immediately when engine has started.

NOTE: Do not engage electric starter for more than 10 seconds at a time. A rest period should be observed between the cranking cycles to allow electric starter to cool down.

Emergency Starting
The engine can be started with the emergency starter rope supplied with the tool kit.

WARNING
Do not wind starting rope around your hand. Hold rope by the handle only. Do not start the snowmobile by the drive pulley unless it is a true emergency situation. Have the snowmobile repaired as soon as possible.

ATTACH THE END OF EMERGENCY ROPE TO REWIND HANDLE.

NOTE: The spark plug socket can be used as an emergency handle.

ATTACH THE OTHER END OF EMERGENCY ROPE TO THE STARTER CLIP SUPPLIED IN THE TOOL KIT.
Hook up clip on drive pulley.

Wind the rope tightly around drive pulley. When pulled, pulley must rotate counterclockwise.

Pull the rope using a sharp, crisp pull so the rope comes free of the drive pulley. Start engine as per usual manual starting.

**WARNING**

When starting the snowmobile in an emergency situation, using drive pulley, do not reinstall the belt guard and return slowly to have snowmobile repaired.

**Vehicle Warm-Up**

Before every ride, vehicle has to be warmed up as follows.

1. Start engine as explained in *ENGINE STARTING PROCEDURE* above.
2. Allow engine to warm up one or two minutes at idle speed.

**NOTE:** Engine will shut down after approximately 12 minutes of idling.
3. Disengage parking brake.
4. Apply throttle until drive pulley engages. Drive at low speed the first two or three minutes.

**NOTICE** If vehicle does not move when throttle is applied, stop engine, remove tether cord cap from the engine cut-off switch, then do the following.

- Check if skis are stuck on the ground. Lift one ski at a time by the handle, then put it down.
- Check if track is stuck on the ground. Lift rear of snowmobile enough to clear track from the ground, then drop.
- Check rear suspension for hard snow or ice accumulation that could interfere with track rotation. Clean the area.

**CAUTION** Beware of injuries by using proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.
WARNING
Make sure tether cord cap is removed before standing in front the vehicle, getting close to the track or rear suspension components.

NOTE: On E-TEC models, warm-up is electronically controlled. During this period (up to 10 minutes depending on ambient temperature), engine RPM is limited.

Engaging Reverse (RER)

When the engine is running, depressing the RER button will slow down engine RPM to almost a stop and advance the ignition timing to invert crankshaft rotation.
- Engine will automatically shift into forward when restarting after stopping or stalling.
- Shifting procedure will take place only when the engine is running.
- If engine is running at a speed above 4300 RPM, the function of the RER button is disabled.
- It is recommended to warm up the engine to its normal operating temperature before shifting.

Shifting in Reverse

1. Bring vehicle to a complete stop.
2. Apply and hold brake. Remain seated, refer to RIDER POSITION (REVERSE OPERATION) for posture information.
3. With engine at idle speed, press and release the RER button.
4. Wait until reverse beeper sounds, then gently depress throttle lever.

WARNING
Engaging the reverse mode is done by depressing the RER button when the engine is running. Wait until the reverse alarm sounds and the RER pilot lamp comes on in the analog/digital gauge before operating throttle to proceed in reverse. The reverse speed is not limited. Always proceed with caution as fast reverse could result in loss of vehicle stability. Come to complete stop before depressing RER button. Always remain seated and apply the brake before shifting. Ensure the path behind is clear of obstacles or bystanders before proceeding.

Shifting in Forward

1. Bring vehicle to a complete stop.
2. Apply and hold brake.
3. Press and release the RER button.
4. RER pilot lamp will stop.
5. Apply throttle slowly and evenly. Allow drive pulley to engage then accelerate carefully.

Shutting Off the Engine

Release throttle lever and wait until engine has returned to idle speed.
Shut off the engine using either the emergency engine stop switch or by pulling off the tether cord cap from the engine cut-off switch.

WARNING
Always remove the tether cord cap from engine cut-off switch when vehicle is not in operation in order to prevent accidental engine starting or to avoid unauthorized use by children or others or theft.
RIDING CONDITIONS AND YOUR SNOWMOBILE

Altitude
At factory, your snowmobile was calibrated to be used within an altitude range (height above the sea level). For your model’s factory calibration, refer to the following table.

<table>
<thead>
<tr>
<th>MODEL(S)</th>
<th>FACTORY CALIBRATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>All models except SUMMIT and FREERIDE 146/154 (North America)</td>
<td>Sea level up to 600 m (2000 ft)</td>
</tr>
<tr>
<td>SUMMIT and FREERIDE 146/154 (North America)</td>
<td>Within 600 – 2400 m (2000 – 8000 ft)</td>
</tr>
</tbody>
</table>

If your snowmobile is to be used at an altitude outside the specified range, have it calibrated accordingly by an authorized Ski-Doo dealer.

**NOTICE** An inappropriate altitude calibration would decrease performance and may cause serious damage to the snowmobile.

Temperature

**600 Engine**
This engine has been calibrated for -20°C (-4°F). They can be operated at warmer winter temperatures without risk of problems.

**NOTICE** For colder temperatures than -20°C (-4°F), carburetors must be re-calibrated to avoid engine damage. Refer to an authorized Ski-Doo dealer.

Hard Packed Snow

Models Equipped with Minimum Track Profile of 1.75 in
BRP does not recommend to ride a snowmobile equipped with high lug profile track at high speed in a trail, on hard packed surfaces or ice for an extended period of time.

In the event that you have to, reduce your speed, then minimize the distance you ride on those surfaces.

**NOTICE** Running those tracks at high speed in a trail, on hard packed surfaces or ice put more stress on the lugs, which tend to heat up as a result. To avoid potential degradation or damage to the track, reduce your speed, then minimize the distance you ride on those surfaces.
SPECIAL OPERATION

Towing an Accessory
Always use a rigid tow bar to tow an accessory. Any towed accessory should have reflectors on both sides and at the rear. Check local laws for brake light(s) requirements.

WARNING
Never tow an accessory with a rope. Always use a rigid tow bar. Using a rope would result in a collision between the object and the snowmobile and possibly in a tip over in case of a rapid deceleration or on a downward slope.

Towing Another Snowmobile
If a snowmobile is disabled and must be towed use a rigid tow bar. Remove the drive belt from disabled snowmobile, refer to DRIVE BELT in the MAINTENANCE PROCEDURES subsection and tow at moderate speed.

NOTICE Always remove the drive belt of the snowmobile that is to be towed to prevent damage to its belt and drive system.

In an emergency situation only, if a rigid tow bar is not available, a rope can be used. Proceed with extra caution. In some areas, it may be illegal to do so. Check with state or local authorities.
Remove the drive belt, attach the rope to the ski legs (spindles), have someone sit on the towed snowmobile to activate the brake, and tow at low speed.

NOTICE In order to prevent damage to the steering system, never attach the tow rope to the ski loops (handles).

WARNING
Never ride at high speed when towing a disabled snowmobile. Proceed slowly with extra caution.
TUNE YOUR RIDE

Snowmobile handling and comfort depend upon suspension adjustments.

**WARNING**

Suspension adjustment could affect vehicle handling. Always take time to familiarize yourself with the vehicle’s behavior after any suspension adjustment have been made. Always adjust LH and RH suspension components to the same setting.

Choice of suspension adjustments vary with carrying load, operator’s weight, personal preference, riding speed and field condition.

**NOTE:** Some adjustments may not apply to your snowmobile.

**WARNING**

Before proceeding with any suspension adjustment, remember:
- Park in a safe place.
- Remove the tether cord cap from the engine cut-off switch.
- Use appropriate lifting device or have assistance to share lifting stress. If a lifting device is not used, use proper lifting techniques, notably using your legs force.
- Do not attempt to lift the front or rear of vehicle if it is above your limits.
- Support front of vehicle off the ground with a suitable device before adjusting suspension.
- Support rear of vehicle off the ground with a wide-base snowmobile stand with a rear deflector panel.
- Make sure support device is stable and secure.

The best way to set up the suspension is to customize each adjustment one at a time. Various adjustments are interrelated. It may be necessary to readjust center spring after adjusting front springs for instance. Test run the snowmobile under the same conditions; trail, speed, snow, operator riding position, etc. Proceed methodically until you are satisfied.

Following are guidelines to fine-tune suspension. Use suspension adjustment tool provided in the tool kit.

**Rear Suspension Adjustments (SC-5)**

![SC-5™ - ADJUSTABLE COMPONENTS](image)

1. Rear springs
2. Center spring
3. Stopper strap
4. Coupling blocks
5. Rear shock absorber

**NOTICE** Whenever adjusting rear suspension, check track tension and adjust if necessary.

**Stopper Strap**

Stopper strap length has an effect on the amount of weight the center spring has to carry especially during acceleration, therefore on the front end uplift.

Stopper strap length also has an effect on center spring travel.

**NOTICE** Whenever stopper strap length is changed, track tension must be checked.
TUNE YOUR RIDE

ACTION RESULT

Increasing stopper strap length
Lighter ski pressure under acceleration
More center spring travel
More bump absorption capability

Decreasing stopper strap length
Heavier ski pressure under acceleration
Less center spring travel
Less bump absorption capability

Center Spring
Center spring preload has an effect on steering effort, handling and bump absorption.
Also, since center spring preload adjustment puts more or less pressure on the front of the track, it has an effect on the performance in deep snow.

ACTION RESULT

Increasing preload
Lighter steering
More bump absorption capability
Better deep snow starts
Better deep snow performance and handling

Decreasing preload
Heavier steering
Less bump absorption capability
Better trail handling

NOTE: Decreasing the stopper strap length may reduce comfort. If too much weight transfer is felt, try to correct it by adjusting the coupling blocks first. Always install stopper strap bolt as close as possible to the lower shaft.

When operating the snowmobile in deep snow, it may be necessary to vary stopper strap length and/or riding position, to change the angle at which the track rides on the snow. Operator’s familiarity with the various adjustments as well as snow conditions will dictate the most efficient combination.

Generally, a longer stopper strap setting gives better performance in deep snow on a flat landscape.

TYPICAL
1. Position 1 (longest)
2. Position 2
3. Position 3
4. Position 4

CAM TYPE - MOTION CONTROL SHOCK ABSORBER
1. Spring preload adjustment cam
2. Increase preload
3. Decrease preload
TUNE YOUR RIDE

CAM TYPE - HPG™ SHOCK ABSORBER

1. Spring preload adjustment cam
2. Decrease preload
3. Increase preload

TYPICAL - RING TYPE

1. Spring preload adjustment ring
2. Increase preload
3. Decrease preload

NOTE: For cam type or ring type preload adjuster, use the suspension adjustment tool provided in the tool kit.

Rear Springs

Rear spring preload has an effect on comfort, ride height and load compensation.

Also, adjusting rear spring preload shifts more or less weight to the snowmobile front end. As a result, more or less weight is applied to the skis. This has an effect on performance in deep snow, steering effort and handling.

Slight suspension bottoming occurring under the worst riding conditions indicates a good choice of spring preload.

Refer to the following to determine if preload is correct.

<table>
<thead>
<tr>
<th>ACTION</th>
<th>RESULT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increasing preload</td>
<td>Firmer rear suspension</td>
</tr>
<tr>
<td></td>
<td>Higher rear end</td>
</tr>
<tr>

<td>Less bump absorption capability</td>
</tr>
<tr>
<td></td>
<td>Lighter steering</td>
</tr>
<tr>
<td></td>
<td>Better deep snow performance and handling</td>
</tr>
</tbody>
</table>

Refer to the following to determine if preload is correct.

A. Suspension fully extended
B. Suspension has collapsed with operator, passenger and load added
C. Distance between dimension “A” and “B”, see table below
“C” | WHAT TO DO
---|---
50 to 75 mm (2 to 3 in) | No adjustment required
More than 75 mm (3 in) | Adjusted too soft, increase preload
Less than 50 mm (2 in) | Adjusted too firm, decrease preload

NOTE: If the specification is unattainable with the original springs, see an authorized Ski-Doo dealer for other available springs.

To increase spring preload, using tool, always turn the left side adjustment cam in a clockwise direction, and the right side cam in a counterclockwise direction.

⚠️ CAUTION Never set preload cams directly from position 5 to 1 or directly from position 1 to 5.

The adjustment cams have 5 different settings, 1 being the softest.

---

Rear Shock Absorber

Rear Shock Compression Damping

**KYB PRO Series Only**

NOTE: Both low and high speed compression damping are adjusted simultaneously.

Low speed compression damping controls how the shock absorber reacts to a low suspension velocity (slow compression strokes, in most cases when riding at lower speeds).

High speed compression damping controls how the shock absorber reacts to a high suspension velocity (quick compression strokes, in most cases when riding at higher speeds).

<table>
<thead>
<tr>

To adjust, turn the adjuster button located on the oil reservoir on shock clockwise to increase compression damping force and counterclockwise to decrease compression damping force.

---

(1) The KYB Pro Series is a registered mark of KYB America LLC.
1. Rear shock absorber
2. Compression damping adjuster (button)

Coupling Blocks
Coupling blocks adjustment has an effect on vehicle handling during acceleration only.

NOTE: A high coupling block setting will reduce both comfort and transfer under acceleration.

To adjust, turn coupling blocks using the suspension adjustment tool provided in the tool kit.

Place the desired setting number towards rubber stopper.

**WARNING**
Both blocks must be set at the same position. Otherwise vehicle behavior may be unpredictable and suspension may become warped.

**COUPLING BLOCK — LEFT SIDE VIEW**

Rear Shock Absorber

Rear Shock Compression Damping

*KYB PRO Series Only*

NOTE: Both low and high speed compression damping are adjusted simultaneously.

Low speed compression damping controls how the shock absorber reacts to a low suspension velocity (slow compression strokes, in most cases when riding at lower speeds).
High speed compression damping controls how the shock absorber reacts to a high suspension velocity (quick compression strokes, in most cases when riding at higher speeds).

<table>

To adjust, turn the adjuster button located on the oil reservoir on shock clockwise to increase compression damping force and counterclockwise to decrease compression damping force.

Rear Suspension Adjustments (rMotion)

**NOTICE** Whenever adjusting rear suspension, check track tension and adjust if necessary.
Stopper Strap
Stopper strap length has an effect on the amount of weight the center spring has to carry especially during acceleration, therefore on the front end uplift. Stopper strap length also has an effect on center spring travel.

**NOTICE** Whenever stopper strap length is changed, track tension must be checked.

<table>
<thead>
<tr>
<th>ACTION</th>
<th>RESULT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increasing stopper strap length</td>
<td>Lighter ski pressure under acceleration</td>

<tr>
<td>Decreasing stopper strap length</td>
<td>Heavier ski pressure under acceleration</td>
</tr>
<tr>
<td></td>
<td>Less center spring travel</td>
</tr>
<tr>
<td></td>
<td>Less bump absorption capability</td>
</tr>
</tbody>
</table>

**NOTE:** Decreasing the stopper strap length may reduce comfort. If too much weight transfer is felt, try to correct it by adjusting the coupling blocks first. Always install stopper strap bolt as close as possible to the lower shaft.

When operating the snowmobile in deep snow, it may be necessary to vary stopper strap length and/or riding position, to change the angle at which the track rides on the snow. Operator’s familiarity with the various adjustments as well as snow conditions will dictate the most efficient combination.

Generally, a longer stopper strap setting gives better performance in deep snow on a flat landscape.

**Center Spring**
Center spring preload has an effect on steering effort, handling and bump absorption.

Also, since center spring preload adjustment puts more or less pressure on the front of the track, it has an effect on the performance in deep snow.

<table>

TUNE YOUR RIDE

**TYPICAL - RING TYPE**
1. Spring preload adjustment ring
2. Increase preload
3. Decrease preload

NOTE: For ring type preload adjuster, use the suspension adjustment tool provided in the tool kit.

**Rear Spring**
Rear spring preload has an effect on comfort, ride height and load compensation.
Also, adjusting rear spring preload shifts more or less weight to the snowmobile front end. As a result, more or less weight is applied to the skis. This has an effect on performance in deep snow, steering effort and handling.
Slight suspension bottoming occurring under the worst riding conditions indicates a good choice of spring preload.

<table>

</table>

**TYPICAL — PROPER ADJUSTMENT**
A. Suspension fully extended
B. Suspension has collapsed with operator, passenger(s) and load added
C. Distance between dimension “A” and “B”, see table below
NOTE: If the specification is unattainable with the original springs, see an authorized Ski-Doo dealer for other available springs.

rMotion Without Quick Adjust Knob
To increase spring preload using tool, always turn the left side adjustment cam in a clockwise direction, and the right side cam in a counterclockwise direction.

⚠️ CAUTION Never set preload cams directly from position 5 to 1 or directly from position 1 to 5.

⚠️ WARNING Both rear spring preload must be set at the same position. Otherwise vehicle behavior may be unpredictable and suspension may become warped.

The adjustment cams have 5 different settings, 1 being the softest.
**TUNE YOUR RIDE**

**rMotion With Quick Adjust Knob**

1. LH side knob to adjust spring preload

<table>
<thead>
<tr>
<th>ACTION</th>

To adjust, turn clockwise to increase damping force and counterclockwise to decrease damping force.

REAR SHOCK MOUNTING POSITION
1. High performance position
2. Sport position

1. Center shock compression damping adjustment knob
Coupling Blocks

Coupling blocks adjustment has an effect on vehicle handling during acceleration only.

**NOTE:** A high coupling block setting will reduce both comfort and transfer under acceleration.

To adjust, push on release button under cam and turn coupling block to the desired setting.

Place the desired setting number towards rubber stopper. No tools required.

---

**WARNING**

Both blocks must be set at the same position. Otherwise vehicle behavior may be unpredictable and suspension may become warped.

---

### Coupling Blocks Setting

<table>

### Front Suspension Adjustments

**Skis**

**Renegade Backcountry and Summit Series**

On these models, it is possible to set the ski stance to two different widths.

When the spacer is installed inside the ski leg, skis are set to the narrower stance.

When the spacer is installed outside the ski leg, skis are set to the wider stance.

To change the ski stance, proceed as follows on both sides:

1. Lift the front of vehicle.
2. Remove the ski bolt.
3. Place the spacer according to the desired stance, see illustration.
TUNE YOUR RIDE

</tr>
</thead>
<tbody>
<tr>
<td>48 N·m ± 6 N·m (35 lb·ft ± 4 lb·ft)</td>
</tr>
</tbody>
</table>

NOTE: Make sure your vehicle does not exceed the maximum width allowed for trail riding. Check local regulations.

Front Springs
Front spring preload has an effect on front suspension firmness.
Front spring preload also has an effect on the steering behavior.

**NOTICE** In order to have a sufficient preload, the spring free length (with skis off the ground) must not exceed 270 mm (10.63 in). An insufficient preload can cause the spring stopper to fall off the shock absorber.

<table>
<thead>
<tr>
<th>ACTION</th>

</tbody>
</table>
VEHICLE TRANSPORTATION

Make sure that oil reservoir and fuel tank caps are properly installed.

Tilt bed trailers can easily be equipped with a winch mechanism to afford maximum safety in loading. Simple as it may seem, never drive your snowmobile onto a tilt bed trailer or any other kind of trailer or vehicle. Many serious accidents have resulted from driving up and over a trailer. Anchor your vehicle securely, front and rear, even on short hauls. Be certain all equipment is securely fastened. Cover your snowmobile when trailering to prevent road grime from causing damage.

Be certain your trailer meets state or provincial requirements. Ensure the hitch and safety chains are secure and the brake, turn indicators and clearance lights all function.
MAINTENANCE
We suggest that after the first 10 hours or 500 km (300 mi) of operation, whichever comes first, your vehicle be inspected by an authorized Ski-Doo dealer. The break-in inspection is very important and must not be neglected.

**NOTE:** The break-in inspection is at the expense of the vehicle owner. We recommend that this inspection be signed by an authorized Ski-Doo dealer.

<table>
<thead>
<tr>
<th>Date of inspection</th>
<th>Authorized dealer signature</th>
</tr>
</thead>
</table>

**BREAK-IN INSPECTION**

- Adjust oil injection pump *(600 and 800R Power TEK models)*
- Inspect spark plugs *(600 and 800R Power TEK models)*
- Inspect exhaust system and check for leaks
- Check coolant level
- Inspect fuel lines and connections
- Inspect throttle cable
- Inspect drive belt
- Visually inspect drive pulley
- Tighten drive pulley retaining screw to specified torque
- Inspect driven pulley
- Adjust and align track
- Change chaincase oil
- Adjust drive chain
- Check brake fluid level
- Inspect brake hose, pads and disk
- Inspect steering mechanism
- Inspect skis and runners
- Inspect front suspension
- Inspect rear suspension and slider shoes

---

102
MAINTENANCE SCHEDULE

Maintenance is very important for keeping your vehicle in safe operating condition. Proper maintenance is the owner’s responsibility. The vehicle should be serviced as per the maintenance schedule.

The maintenance schedule does not exempt the pre-ride inspection.

<table>
<thead>
<tr>
<th><strong>WARNING</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Failure to properly maintain the vehicle according to the maintenance schedule and procedures can make it unsafe to operate.</td>
</tr>
</tbody>
</table>

### EVERY 1 500 KM (1,000 MI)
- Adjust drive chain

### EVERY 3,000 KM (2,000 MI) OR 1 YEAR (WHICHEVER COMES FIRST)
- Inspect engine rubber mounts
- Inspect exhaust system and check for leaks
- Adjust engine stopper
- Visually inspect and clean drive pulley
- Tighten drive pulley retaining screw to specified torque
- Clean driven pulley
- Adjust and align track
- Inspect brake hose, pads and disk
- Inspect steering mechanism
- Inspect front suspension
- Inspect rear suspension and stopper strap
- Lubricate rear suspension (lubricate whenever the vehicle is used in wet conditions (rain, puddles))

### EVERY 6,000 KM (4,000 MI) OR 2 YEARS (WHICHEVER COMES FIRST)
- Inspect fuel pump strainer and replace if necessary
- Replace brake fluid
- Inspect throttle cable
- Clean and lubricate rewind starter
- Replace the following drive pulley wear parts: slider shoes, O-rings and sliding sheave bushing (800R Power-TEK and 800R E-TEC)
### MAINTENANCE SCHEDULE

**EVERY 10 000 KM (6,000 MI) OR 3 YEARS (WHICHEVER COMES FIRST)**

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replace spark plugs (E-TEC)</td>

</tbody>
</table>
MAINTENANCE PROCEDURES

This section includes instructions for basic maintenance procedures. If you have the necessary mechanical skills and the required tools, you can perform these procedures. If not, see your authorized Ski-Doo dealer.

Other important items in the maintenance schedule that are more difficult and require special tools are best performed by your authorized Ski-Doo dealer.

⚠️ WARNING

Turn off the engine, remove tether cord cap and follow these maintenance procedures when performing maintenance. If you do not follow proper maintenance procedures you can be injured by hot parts, moving parts, electricity, chemicals or other hazards.

⚠️ WARNING

Should removal of a locking device be required (e.g. lock tabs, self-locking fasteners, etc.) when undergoing disassembly/assembly, always replace with a new one.

Air Filter with Single Air Intake (except Summit)

Air Filter Verification

Ensure the air intake prefilter is properly installed, clean and in good condition.

Air Filter with Single Air Intake (Summit)

Air Filter Verification

Ensure that air filter is properly installed, clean and in good condition.

Air Filter Removal

1. Refer to CONTROLS, INSTRUMENTS AND EQUIPMENT, remove hood and open LH side panel.
2. Pull filter out of the air intake silencer.

Air Filter Cleaning

1. Detach prefilter from foam filter.
2. Blow compressed air through foam filter in the opposite direction of engine air flow.
3. Rinse prefilter in fresh water. Allow to dry completely before installation.
4. Install prefilter onto foam filter.

**Air Filter Installation**
1. Align the foam filter slot with the guide in the air intake silencer opening.

2. Push filter in the air intake silencer opening so that the slot bottom leans against the guide and the edges are completely inserted.
3. Close side panel and install hood.

**Air Filter with Dual Air Intake (800R E-TEC)**

**Air Filter Verification**
There are two air intake pre-filters, one on each side of the console. Ensure the air intake pre-filters are properly installed, clean and in good condition.

If the air filter has to be cleaned or replaced, see an authorized Ski-Doo dealer.

**Engine Coolant**

**WARNING**
Never open coolant tank cap when engine is hot.

**Engine Coolant level Verification**
Check coolant level at room temperature with the cap removed. Liquid should be at cold level line (engine cold) of coolant tank.

**NOTE:** When checking level at low temperature it may be slightly lower then the mark.
If additional coolant is necessary or if entire system has to be refilled, refer to an authorized Ski-Doo dealer.
TYPICAL
1. Coolant tank
2. COLD LEVEL line

Recommended Engine Coolant
Always use ethylene-glycol antifreeze containing corrosion inhibitors specifically for internal combustion aluminum engines.

Cooling system must be filled with BRP PREMIXED COOLANT (P/N 219 700 362) or with distilled water and antifreeze solution (50% distilled water, 50% antifreeze).

Exhaust System

Exhaust System Verification
The muffler tail pipe should be centered with the exit hole in the bottom pan. Exhaust system must be free of rust or leaks. Make sure that all parts are securely in place.

Check retaining springs condition and replace if necessary.

The exhaust system is designed to reduce noise and to improve the total performance of the engine. Modification may be in violation of local laws.

**NOTICE** If any exhaust system component is removed, modified or damaged, severe engine damage may result.

---

**Spark Plugs**

*(600 and 800R Power TEK)*

**Spare Spark Plug Storage**
A space is provided in the tool kit to keep spare spark plugs dry and prevent shocks that might affect the adjustment or break them.

**NOTE:** Spare spark plugs are not supplied with snowmobile.

**Spark Plug Removal**
1. Open LH side panel, refer to **CONTROL, INSTRUMENTS AND EQUIPMENT**.
2. Remove belt guard, refer to **DRIVE BELT GUARD REMOVAL**.
3. Carefully remove spark plug wire cap with a twisting and pulling motion.
4. Using a proper socket or the spark plug socket and screwdriver rod from tool kit, unscrew spark plug a few turns without removing it.

---

**Spark Plug Installation**
1. Measure spark plug gap.

**NOTE:** The gap is not adjustable. If gap is incorrect, replace spark plugs.

**NOTICE** Do not attempt to adjust gap on these spark plugs.
MAINTENANCE PROCEDURES

ENGINE

| SPARK PLUG GAP  |
| (NOT ADJUSTABLE) |
| 600 and 800R Power TEK |
| 0.70 mm to 0.80 mm (.028 in to .031 in) |

2. Apply LOCTITE 767 (ANTISEIZE LUBRICANT) (P/N 293 800 070) on spark plug threads.
3. Screw spark plugs into cylinder head by hand until it bottoms.
4. Perform the final tightening using the appropriate tools from the tool kit or with a torque wrench and a proper socket. Torque to specification according to tool.

**SPECIFICATION**

| Using a torque wrench | 27 N•m ± 2 N•m (20 lbf•ft ± 1 lbf•ft) |
| With the socket from the tool kit | 1/2 turn for a new spark plug and 1/10 turn for a used spark plug |

5. Connect spark plug wires.

**Spark Plugs (E-TEC)**

Spark plugs inspection or replacement must be done by an authorized Ski-Doo dealer.

**Engine Stopper**

**Engine Stopper Adjustment**

The engine stopper is located on the LH front engine support, in front of the drive pulley.

1. Remove D.E.S.S. key from post.
2. Remove the LH side panel, refer to CONTROLS, INSTRUMENTS AND EQUIPMENT.
3. Remove drive belt guard, refer to DRIVE BELT GUARD REMOVAL subsection in CONTROLS, INSTRUMENTS AND EQUIPMENT.

4. Loosen the three screws retaining the engine stopper to the engine support just enough to allow a vertical play (1/2 to one turn).

5. Insert a 0.5 mm (.02 in) feeler gauge in the engine stopper opening (see illustration).

6. Place feeler gauge between engine stopper and rubber stop block (on engine).

**NOTE:** Do not insert the feeler gauge too deep, as it will pass over the bump at the surface of the rubber stop block and alter adjustment. See illustration.
1. Rubber stop block
2. Bump
3. Feeler gauge

7. Tighten screws to 10 N\(\cdot\)m ± 2 N\(\cdot\)m (89 lbf\(\cdot\)in ± 18 lbf\(\cdot\)in) following the illustrated sequence, taking care not to pinch the feeler gauge.

**NOTICE**  Serious pulley damage can occur if the engine stopper and its screws are not properly installed.

**Brake Fluid**

*Recommended Fluid*

Use only DOT 4 brake fluid from a sealed container. An opened container may be contaminated or may have absorbed moisture from the air.

**WARNING**  Use only DOT 4 brake fluid from a sealed container. To avoid serious damage to the braking system, do not use fluids other than the recommended one, nor mix different fluids for topping up.

**Brake Fluid Level Verification**

**NOTICE**  Vehicle must be on a level surface before checking any fluid levels.

Check brake fluid (DOT 4) in reservoir for proper level. Add fluid (DOT 4) as required.
MAINTENANCE PROCEDURES

CAUTION  Avoid getting brake fluids on skin or eyes - it may cause severe burns. In case of contact skin, wash thoroughly. In case of contact with the eyes, immediately rinse with plenty of water for at least 10 minutes and then consult a doctor immediately.

Chaincase Oil

Recommended Chaincase Oil

<table>
<thead>
<tr>
<th>RECOMMENDED CHAINCASE OIL</th>
</tr>
</thead>
<tbody>
<tr>
<td>XPS SYNTHETIC CHAINCASE OIL (P/N 413 803 300)</td>
</tr>
</tbody>
</table>

NOTICE The chaincase of this snowmobile has been developed and validated using the XPS™ Synthetic chaincase oil. BRP strongly recommends the use of its XPS Synthetic chaincase oil at all times. Damages caused by oil which is not suitable for the chaincase will not be covered by the BRP limited warranty.

Access to Chaincase

Open RH side panel, refer to CONTROLS, INSTRUMENTS AND EQUIPMENT.

Chaincase Oil Level Verification

With the vehicle on a level surface, check the oil level by removing the magnetic check plug on the left side of chaincase.

Oil level must reach the threaded hole's lower edge.

NOTE: It is normal to find metallic particles stuck to magnetic check plug. If bigger pieces of metal are found, remove the chaincase cover and inspect the chaincase parts.
Remove metal particles from magnetic check plug.

Chaincase Filling Procedure

Remove the magnetic check plug.
Remove the filler cap on the chaincase cover.

Pour recommended oil in chaincase by the filler hole until oil comes out by the check plug hole.
Reinstall check plug and torque to specification.

<table>
<thead>
<tr>
<th>CHECK PLUG TORQUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>6N·m ± 1 N·m (53 lb·in ± 9 lb·in)</td>
</tr>
</tbody>
</table>

Reinstall the filler cap.
**Drive Belt**

**Drive Belt Inspection**
Inspect belt for cracks, fraying or abnormal wear (uneven wear, wear on one side, missing cogs, cracked fabric). If abnormal wear is noted, probable cause could be pulley misalignment, excessive RPM with frozen track, fast starts without warm-up period, burred or rusty sheave, oil on belt or distorted spare belt. Contact an authorized Ski-Doo dealer.

**Drive Belt Replacement**

**Drive Belt Removal**
1. Remove tether cord cap from engine cut-off switch.
2. Remove drive belt guard, refer to CONTROLS, INSTRUMENTS AND EQUIPMENT.
3. Insert the driven pulley expander provided in the tool kit in the threaded hole on the adjuster hub as shown.

```
1. To be pointed in the direction of rotation
```

4. Open the driven pulley by screwing the tool in.
5. Remove the drive belt by slipping it over the top of the driven pulley, then over the drive pulley.

**Drive Belt Installation**
1. If necessary, open the driven pulley, refer to DRIVE BELT REMOVAL above.
2. Slip the belt over the drive pulley, then over the driven pulley.

**NOTICE** Do not force or use tools to pry the belt into place, as this could cut or break the cords in the belt.

**NOTE:** The maximum drive belt life span is obtained when belt is installed with arrows in the direction of rotation.

3. Unscrew and remove the driven pulley expander from the pulley.
4. Rotate the driven pulley several times to properly set the belt between the sheaves.
5. If a new belt was installed, adjust the belt height. Refer to DRIVE BELT HEIGHT ADJUSTMENT below.
6. Install belt guard, refer to CONTROLS, INSTRUMENTS AND EQUIPMENT.
7. Close side panel, refer to CONTROLS, INSTRUMENTS AND EQUIPMENT.

**Drive Belt Height Adjustment**
The drive belt height must be checked every time a new drive belt is installed. To adjust the drive belt height, proceed as follows:
1. Remove tether cord cap from engine cut-off switch.
2. Remove drive belt guard.
3. Loosen the clamping screw.

4. Using the suspension adjustment tool provided in the tool kit, turn the ring 1/4 turn at a time then rotate the driven pulley to properly set the drive belt between the pulley sheaves.

NOTE: The adjustment ring has left hand treads.

**600 Models**
Repeat step 4 until the drive belt is even with the driven pulley edge.

**PRELIMINARY SETTING**
1. Drive belt flush with driven pulley edge

**600 HO E-TEC, 800R Power TEK and 800R E-TEC Models**
Repeat step 4 until the lowest portion of the cogs on the external surface of drive belt is even with the driven pulley edge.

**TYPICAL - PRELIMINARY SETTING**
1. Lowest portion of cogs even with external surface of drive belt

**All Models**
NOTE: Turning the ring counterclockwise lowers the drive belt in the pulley. Turning the ring clockwise raises the drive belt in the pulley.

5. Firmly tighten the clamping screw. If possible, tighten to specified torque using a torque wrench.

<table>
<thead>
<tr>
<th>TORQUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clamping Screw</td>
</tr>
<tr>
<td>5.5 N•m ± 0.5 N•m (49 lbf•in ± 4 lbf•in)</td>
</tr>
</tbody>
</table>
MAINTENANCE PROCEDURES

NOTE: Use precision digital tachometer for engine RPM adjustment.

NOTE: The adjustment has an effect on high RPM only.

There are 6 positions numbered 1 to 6. The calibration screws have 6 different settings identified by numbers scribed on their head. The actual setting is the screw head number aligned with the mark on the pulley.

Drive Pulley
Drive Pulley Adjustment

WARNING

Remove tether cord cap from engine cut-off switch before performing any adjustment. Vehicle must be parked in a safe place, away from the trail.

The drive pulley is factory calibrated to transmit maximum engine power at a predefined RPM. Factors such as ambient temperature, altitude or surface condition may vary this critical engine RPM thus affecting snowmobile efficiency.

This adjustable drive pulley allows setting maximum engine RPM to maintain maximum power.

Calibration screws should be adjusted so that actual maximum engine RPM matches the maximum horsepower RPM.

<table>
<thead>
<tr>
<th>ENGINE</th>
<th>MAXIMUM HORSEPOWER RPM</th>
</tr>
</thead>
<tbody>
<tr>
<td>600 HO E-TEC</td>
<td>8100 RPM (± 100)</td>
</tr>
<tr>
<td>800R E-TEC</td>
<td>8150 RPM (± 100)</td>
</tr>
<tr>
<td>800R Power TEK</td>
<td>7900 RPM (± 100)</td>
</tr>
</tbody>
</table>

NOTE: These settings are correct as a preliminary adjustment for most models. In some cases, when starting the engine, the vehicle could creep, indicating that the drive belt is too tight.

If the vehicle creeps, lower the drive belt height from the preliminary setting. Repeat procedure until creeping stops.

Reverse Activation
NOTE: The reverse may not activate if the belt is positioned too high in the driven pulley. If reverse activation does not work properly, ensure the drive belt is properly adjusted. Adjust the drive belt lower in the driven pulley if needed.

TYPICAL
1. Clamping screw
6. Install drive belt guard.
7. Install side panel.

NOTE: The reverse may not activate if the belt is positioned too high in the driven pulley. If reverse activation does not work properly, ensure the drive belt is properly adjusted. Adjust the drive belt lower in the driven pulley if needed.

NOTE: These settings are correct as a preliminary adjustment for most models. In some cases, when starting the engine, the vehicle could creep, indicating that the drive belt is too tight.

<tr>
<td>800R E-TEC</td>
<td>8150 RPM (± 100)</td>
</tr>
<tr>
<td>800R Power TEK</td>
<td>7900 RPM (± 100)</td>
</tr>
</tbody>
</table>

NOTE: Use precision digital tachometer for engine RPM adjustment.

NOTE: The adjustment has an effect on high RPM only.

There are 6 positions numbered 1 to 6. The calibration screws have 6 different settings identified by numbers scribed on their head. The actual setting is the screw head number aligned with the mark on the pulley.
MAINTENANCE PROCEDURES

Each position modifies maximum engine RPM by about 200 RPM.
Lower position numbers decrease engine RPM in steps of 200 RPM and higher position numbers increase it in steps of 200 RPM.

Example:
Calibration screws initially set at position 4 and changed to position 6 will increase maximum engine RPM by 400 RPM.

Procedure
Loosen the lock nut just enough to get the calibration screw head out of the pulley and rotate to the desired position. Do not completely remove the lock nut.
Set all 3 calibration screws to the same position.
Tighten lock nuts to 10 N•m ± 2 N•m (89 lbf•in ± 18 lbf•in).

NOTICE Do not completely remove calibration screw otherwise internal washers will fall off. Always adjust all 3 calibration screws and make sure they are all set to the same position.

WARNING
NEVER disassemble or modify the drive pulley.
Improper assembly or modifications could cause the pulley to explode violently under the stress generated by the high rotational speed.
See your Ski-Doo dealer to maintain or service the drive pulley. Improper servicing or maintenance may affect performance and reduce belt life. Always respect maintenance schedules.

WARNING
NEVER operate engine:
– Without shields and belt guard securely installed.
– With hood and/or side panels opened or removed.
NEVER attempt to make adjustments to moving parts while engine is running.

Track
Track Condition

WARNING
Remove tether cord cap from engine cut-off switch before performing any maintenance or adjustment, unless otherwise specified. Vehicle must be parked in a safe place, away from the trail.

Remove tether cord cap from engine cut-off switch.
Lift the rear of the snowmobile and support it with a wide-base snowmobile mechanical stand with a rear deflector panel. With the engine off, rotate the track by hand, and inspect condition. If worn or cut, or if track fibers are exposed, or if missing or defective inserts or guides are noted; contact an authorized Ski-Doo dealer.
Snowmobiles Equipped with Traction Enhancing Products

If your snowmobile is equipped with a BRP approved studded track, PROCEED WITH A VISUAL INSPECTION OF YOUR TRACK BEFORE EACH USE.

Look for any defects, such as:
- Perforations in the track
- Tears in the track (particularly around traction holes on studded tracks)
- Lugs that are broken or torn off, exposing portions of rods
- Delamination of the rubber
- Broken rods
- Broken studs (studded tracks)
- Bent studs (studded tracks)
- Missing studs
- Studs that are torn off the track
- Missing track guide(s)
- Also, ensure that studs nut are tighten to the recommended torque.

On approved studded tracks, replace broken or damaged studs immediately. If your track shows signs of deterioration, it must be replaced immediately. When in doubt, ask your dealer.

To prevent serious injury to individuals near the snowmobile:
- NEVER stand behind or near a moving track.
- Always use a wide-base snowmobile stand with a rear deflector panel if it is necessary to rotate track.
- When the track is raised off the ground, only run it at the lowest possible speed.

Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force, possibly resulting in the loss of a leg or other serious injury.

Track Tension Verification

NOTE: Ride the snowmobile in snow about 15 to 20 minutes prior to adjusting track tension.

1. Remove tether cord cap from engine cut-off switch.

2. Lift rear of vehicle and support it off the ground.

CAUTION Use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

3. Allow rear suspension to fully extend.

4. Use the Tensiometer (P/N 414 348 200).

5. Set deflection between 30 mm and 35 mm (1-3/16 in and 1-3/8 in) using bottom O-ring.

Track Tension and Alignment

NOTE: Track tension and alignment are interrelated. Do not adjust one without the other.
MAINTENANCE PROCEDURES

DEFLECTION SETTING
1. Bottom O-ring

6. Place upper O-ring to 0 kgf (0 lbf).
7. Position the tensiometer on track, halfway between front and rear idler wheels.
8. Push the tensiometer downwards until bottom O-ring (deflection set earlier) be aligned with the bottom of slider shoe.

LOAD READING
1. Upper O-ring

10. Load reading must be as per the following table.

<table>
<thead>
<tr>
<th>TRACK ADJUSTMENT SPECIFICATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Track deflection setting</td>
</tr>
<tr>
<td>Track load reading</td>
</tr>
</tbody>
</table>

11. If load reading is not in accordance with the specification, adjust track tension. Refer to TRACK TENSION ADJUSTMENT.

Track Tension Adjustment
1. Remove tether cord cap from engine cut-off switch.
2. Remove rear wheel caps (if so equipped).
3. Loosen the rear idler wheel retaining screws.
MAINTENANCE PROCEDURES

1. RH rear idler wheel bolt

4. Tighten or loosen both adjustment screws to increase or decrease track tension.

1. RH adjustment screw

5. If correct tension is unattainable, contact an authorized Ski-Doo dealer.

6. Retighten retaining bolts to specification.

<table>
<thead>
<tr>
<th>TORQUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retaining bolts</td>
</tr>
</tbody>
</table>

7. Check track alignment as described below.

Track Alignment

**WARNING**

Before checking track alignment, ensure that the track is free of all particles which could be thrown out while track is rotating. Keep hands, tools, feet and clothing clear of track. Always lift the snowmobile on a wide-base stand with a rear deflector panel. Ensure no one is standing in close proximity to the snowmobile, especially at the rear of the track. Never rotate track at high speed. Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force.

1. Lift rear of vehicle and support it off the ground.

**CAUTION** Use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

2. Start engine and accelerate slightly so that track slowly turns. This must be done in a short period of time (15 to 20 seconds).

3. Check that the track is well centered; equal distance on both sides between edges of track guides and slider shoes.

---

1. Guides
2. Slider shoes
3. Equal distance
4. To correct track alignment:
4.1 Stop engine.
4.2 Remove tether cord cap from engine cut-off switch.

**WARNING**
Remove tether cord cap from engine cut-off switch before performing any maintenance or adjustment, unless otherwise specified. Vehicle must be parked in a safe place, away from the trail.

4.3 Loosen rear wheel retaining screws.
4.4 Tighten adjustment screw on side where the slider shoe is the farthest from the track insert guides.

5. Tighten retaining screws.

**WARNING**
Properly tighten wheel retaining bolts, otherwise wheel may come off and cause track to “lock”.

6. Restart engine and rotate track slowly to recheck alignment.
7. Reposition snowmobile on the ground.
8. Install rear wheel caps if so equipped.

**Suspension**

**Rear Suspension Condition**
Visually inspect all suspension components including slider shoes, springs, wheels, etc.

**NOTE:** During normal driving, snow will act as a lubricant and coolant for the slider shoes. Extensive riding on ice or sanded snow, will create excessive heat build-up and cause premature slider shoe wear.

**Suspension Stopper Strap Condition**
Inspect stopper strap for wear and cracks, bolt and nut for tightness. If loose inspect holes for deformation. Replace as required. Torque nut to specification.

**TORQUE**

<table>
<thead>
<tr>
<th>Component</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nut</td>
<td>10 N•m ± 1 N•m (89 lb•in ± 9 lb•in)</td>
</tr>
</tbody>
</table>
Rear Arm Lubrication

Lubricate rear arm at grease fittings using SUSPENSION GREASE (P/N 293 550 033). Refer to MAINTENANCE SCHEDULE for maintenance frequency.

Skis

Wear and Condition of Skis and Runners

Check the condition of the skis and ski runner carbides. If worn, contact an authorized Ski-Doo dealer.

WARNING

Excessively worn skis and/or ski runners will adversely affect snowmobile control.

Fuses

Fuse Inspection

Check fuse condition and replace it if necessary. To remove fuse from holder, pull fuse out. Check if filament is melted.

WARNING

Do not use a higher rated fuse.

WARNING

If fuse has burnt out, source of malfunction should be determined and corrected before restarting. See an authorized Ski-Doo dealer for servicing.

Steering and Front Suspension Condition

Visually inspect steering and front suspension for tightness of components (steering arms, control arms and links, tie rods, ball joints, ski bolts, ski legs, etc.). If necessary, contact an authorized Ski-Doo dealer.
MAINTENANCE PROCEDURES

Fuse Location

**600 and 800R Power TEK Manual Start**

**RH SIDE OF ENGINE COMPARTMENT**
1. 15 A headlight fuse (RED/ORANGE wire)
2. 15 A accessories fuse (RED/YELLOW wire)

**600 and 800R Power TEK Electric Start**

**RH SIDE OF ENGINE COMPARTMENT**
1. 15 A headlight fuse (RED/ORANGE wire)
2. 15 A accessories fuse (RED/YELLOW wire)
3. 30 A charging system fuse
4. 5 A ECM (Engine Control Module) fuse

**E-TEC Manual Start**

**TYPICAL - RH SIDE OF ENGINE COMPARTMENT**
1. 5 A start/RER fuse

**E-TEC Electric Start**

**TYPICAL - RH SIDE OF ENGINE COMPARTMENT**
1. 30 A charging system fuse
2. 5 A start/RER fuse

**All Models**

The electric fuel level sender fuse is located behind the air intake silencer.

**BEHIND AIR INTAKE SILENCER**
1. Fuse location
Lights
Always check light operation after bulb replacement.

Headlights Bulb Replacement

**NOTICE** Never touch glass portion of an halogen bulb with bare fingers, it shortens its operating life. If glass is touched, clean it with isopropyl alcohol which will not leave a film on the bulb.

1. By using a small screwdriver, release multifunction gauge locking tabs.

2. Gently pull on multifunction gauge and set aside.

3. Disconnect burnt bulb connector. Remove the rubber boot.

4. Press and pull both sides of the retaining clip at the same time to release it from bulb support.

5. Pull bulb and replace. Properly reinstall parts.

Headlights Beam Aiming
Remove multifunction gauge, refer to HEADLIGHTS BULB REPLACEMENT. Turn knob to adjust beam height.
MAINTENANCE PROCEDURES

Taillight Bulb Replacement

1. Remove taillight housing by carefully pulling on lens at both ends.

TYPICAL

1. Knobs

NOTICE

Taillight housing is held in place by two plastic pins inserted in rubber grommets. If taillight housing is forced too far sideways when removing, mounting pins may break and housing will have to be replaced. Do not pull taillight housing out too far to avoid damaging wiring.

1. Taillight housing retaining pins
2. Retaining grommets
3. Light wire harness

2. Rotate bulb socket counterclockwise to remove it from taillight housing.

3. Push in and rotate bulb counterclockwise to remove it from its socket.

4. Install the new bulb by pushing it in the socket and turning it clockwise.

NOTE: Note position of bulb locking pins on its base, and socket alignment key.

1. Bulb locking pins
2. Bulb holder alignment key
VEHICLE CARE

Post-Operation Care
Remove snow and ice from rear suspension, track, front suspension, steering mechanism and skis.

WARNING
Make sure tether cord cap is away from engine cut-off switch before standing in front of the vehicle, getting close to the track or rear suspension components.

Always cover your snowmobile when leaving it outside overnight or during extended periods of inactivity. This will protect it from frost and snow as well as help retain its appearance.

Vehicle Cleaning and Protection
Wash snowmobile with water mixed with a mild detergent. Use only flannel cloths or an equivalent.

NOTICE It is necessary to use flannel cloths or equivalent on windshield and hood to avoid damaging further surfaces to clean.

To remove grease, oil and grime, use BRP HEAVY DUTY CLEANER (P/N 293110001).

NOTICE Do not use Heavy duty cleaner on decals or vinyl.

To remove stubborn dirt from all plastic and vinyl surfaces, use XPS MULTI-PURPOSE CLEANER (P/N 219701709).

To remove scratches on windshield or hood use the SCRATCH REMOVER KIT (P/N 861774800).

NOTICE Never clean plastic parts or hood with strong detergent, degreasing agent, paint thinner, acetone, products containing chlorine, etc.

Wax painted portion of the vehicle for better protection.
NOTE: Apply wax on glossy finish only.
STORAGE

During summer, or when a snowmobile is not in use for more than three months, proper storage is necessary.

<table>
<thead>
<tr>
<th>STORAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clean the vehicle</td>
</tr>
<tr>
<td>Add fuel stabilizer to fuel following the product manufacturer recommendations. Run the engine after adding the product to the fuel</td>
</tr>
<tr>
<td>Lubricate engine</td>
</tr>
<tr>
<td>Lubricate brake lever pivot</td>
</tr>
<tr>
<td>Inspect and lubricate rear suspension</td>
</tr>
<tr>
<td>Charge battery monthly to keep it fully charged during storage (on models with electric starter)</td>
</tr>
<tr>
<td>Block muffler with rags</td>
</tr>
<tr>
<td>Lift rear of vehicle until track is clear of the ground. Do not release track tension</td>
</tr>
</tbody>
</table>

⚠️ CAUTION  Use appropriate lifting device or have assistance to share lifting stress. If a lifting device is not used, use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

NOTICE  The snowmobile has to be stored in a cool and dry place and covered with an opaque but ventilated tarpaulin. This will prevent sun rays and grime from affecting plastic components and vehicle finish.

NOTICE  Fuel stabilizer should be added prior to engine lubrication to ensure carburetor protection against varnish deposits.

Engine Lubrication

Engine Lubrication Procedure (600 and 800R Power TEK)

Engine internal parts must be lubricated to protect them from possible corrosion during the storage period.

Proceed as follows:

1. Place the vehicle in a well ventilated area and start the engine.
2. Start the engine and let it run at idle speed until it reaches its operating temperature.
3. Stop the engine.
4. Remove the primary air intake silencer as follows:
   4.1 Remove LH side panel. Refer to CONTROLS, INSTRUMENTS AND EQUIPMENT section.
   4.2 Remove drive belt guard. Refer to CONTROLS, INSTRUMENTS AND EQUIPMENT section.
   4.3 Lift tab on rear section of connector tube.
   4.4 Twist tube adapter counter clockwise and pull it off the primary silencer slightly.

**Typical**

Step 1: Lift tab
Step 2: Twist adapter
Step 3: Pull off
4.5 Press locking tab securing the primary air intake silencer and pull silencer out of adapter plate.

5. Restart engine and run at idle speed.

6. Inject storage oil into each carburetor/throttle body until the engine stalls, or until a sufficient quantity of oil has entered the engine (approximately half a can).

7. With the engine stopped, remove the spark plugs and spray XPS STORAGE OIL (EXCEPT U.S. COUNTRY) (P/N 413 711 600) or XPS STORAGE OIL (U.S. COUNTRY ONLY) (P/N 413 711 900) into each cylinder.

8. Slowly crank engine 2 or 3 revolutions to lubricate cylinders.

9. Reinstall spark plugs and primary air intake silencer.

Engine Storage Mode (600 HO E-TEC and 800R E-TEC)

Like other engines, the E-TEC has to be properly lubricated at storage for internal parts protection. The E-TEC system offers a built-in engine lubrication function can be initiated by the operator.

To engage procedure, do the following:

1. Place the vehicle in a well ventilated area.

2. Start the engine and let it run at idle speed until it reaches its operating temperature (watch the coolant temperature on the display or verify the rear heat exchanger becomes warm).

3. Push the SET (S) button to select odometer mode.

**NOTE:** The storage mode does not function in other modes (trip A, trip B and hr trip).

4. Repeatedly depress the HI/LOW beam switch rapidly, then, while doing this, press and hold the SET button until PUSH “S” appears on the display.

5. Release all buttons when gauge displays PUSH “S” appears.

6. Again, press and hold the SET (S) button for 2 - 3 seconds.

**NOTE:** The gauge will display OIL when the storage procedure is initiated.
7. When gauge displays OIL, release button and wait the end of the procedure.

Do not touch anything during engine lubrication cycle.

The engine lubrication procedure takes approximately 1 minute. During this time the engine RPM will increase slightly.

At the end of engine lubrication procedure, the ECM will turn the engine off.

Remove tether cord cap from engine cut-off switch.

**NOTICE** Do not start the engine during storage period.
PRESEASON PREPARATION

- Inspect engine rubber mounts
- Check exhaust system condition and check for leaks
- Check coolant density
- Inspect crankshaft PTO seal
- Inspect fuel lines and connections
- Clean and inspect throttle body (E-TEC)
- Clean, inspect and adjust carburetors (600 and 800R Power TEK)
- Adjust oil injection pump (600 and 800R Power TEK)
- Inspect throttle cable
- Replace spark plugs (600 and 800R Power TEK) after starting the engine with the old spark plugs to burn the excess of storage oil
- Inspect drive belt (adjust at every drive belt replacement)
- Clean and visually inspect drive pulley
- Clean and inspect driven pulley
- Inspect, adjust and align track
- Adjust drive chain
- Change chaincase oil
- Check brake fluid level
- Inspect brake hose, pads and disk
- Inspect steering mechanism
- Inspect skis and runners
- Inspect front suspension
- Inspect rear suspension stopper strap
- Charge battery (on models with electric starter)
- Adjust headlight beam aiming
This page is intentionally blank
TECHNICAL INFORMATION
VEHICLE IDENTIFICATION

Vehicle Description Decal
Vehicle description decal is located on right hand side of tunnel.

Vehicle Identification Number (VIN)
VIN is scribed on vehicle description decal. See above. It is also engraved on tunnel near vehicle description decal.

Vehicle Identification Number (VIN)
VIN is scribed on vehicle description decal. See above. It is also engraved on tunnel near vehicle description decal.

Identification Numbers
The main components of your snowmobile (engine and frame) are identified by different identification numbers. It may sometimes become necessary to locate these numbers for warranty purposes or to trace your snowmobile in the event of loss. These numbers are required by the authorized Ski-Doo dealer to complete warranty claims properly. No warranty will be allowed by BRP if the engine identification number or vehicle identification number (VIN) is removed or mutilated in any way. We strongly recommend that you take note of all the identification numbers on your snowmobile and supply them to your insurance company.

Engine Identification Number
Refer to the following illustrations to locate the engine identification number on the applicable engine.
800R POWER TEK AND 800R E-TEC ENGINES

1. Engine identification number
The EC-Declaration of Conformity does not appear in this version of the Operator's Guide.
Please refer to the printed version that was delivered with your vehicle.
EPA CERTIFIED ENGINES

Maintenance, replacement, or repair of the emission control devices and systems may be performed by any snowmobile SI (Spark Ignition) engine repair establishments or individual.

Engine Emissions Information

Manufacturer's Responsibility
Beginning with 2007 model year engines, snowmobile manufacturers of snowmobile engines need to determine the exhaust emission levels for each engine horsepower family and certify these engines with the United States of America Environmental Protection Agency (EPA). An emissions control information label, showing emission levels and engine specifications, must be placed on each vehicle at the time of manufacture.

Dealer's Responsibility
When performing service on a certified Ski-Doo snowmobiles that carry an emissions control information label, adjustments must be kept within published factory specifications.

Replacement or repair of any emission related component must be executed in a manner that maintains emission levels within the prescribed certification standards.

Dealers are not to modify the engine in any manner that would alter the horsepower or allow emission levels to exceed their predetermined factory specifications.

Exceptions include manufacturer’s prescribed changes, such as altitude adjustments for example.

Owner Responsibility
The owner/operator is required to have engine maintenance performed to maintain emission levels within prescribed certification standards.

The owner/operator is not to, and should not allow anyone to modify the engine in any manner that would alter the horsepower or allow emissions levels to exceed their predetermined factory specifications.

EPA Emission Regulations
All Ski-Doo snowmobiles manufactured by BRP are certified to the EPA as conforming to the requirements of the regulations for the control of air pollution from new snowmobile engines. This certification is contingent on certain adjustments being set to factory standards. For this reason, the factory procedure for servicing the product must be strictly followed and, whenever practicable, returned to the original intent of the design.

The responsibilities listed above are general and in no way a complete listing of the rules and regulations pertaining to the EPA requirements on exhaust emissions for snowmobile products. For more detailed information on this subject, you may contact the following locations:

2. Measure gap between slider shoe and bottom inside track when exerting a downward pull to the track.
3. **NOTICE** Do not attempt to adjust gap on this spark plug.
This page is intentionally blank
TROUBLESHOOTING
TROUBLESHOOTING GUIDELINES (600 AND 800R POWER TEK)

ELECTRIC STARTER DOES NOT WORK
1. One of the switch is not in position to start the engine.
   - Place the emergency engine stop switch in the ON position and install tether cord cap (on engine cut-off switch).

ENGINE IS CRANKED BUT FAILS TO START
1. Mixture not rich enough to start cold engine.
   - Check fuel tank level and check starting procedure, particularly use of the choke.
2. Flooded engine (spark plug wet when removed).
   - Do not choke. Remove wet spark plug, place engine stop switch in OFF position and crank engine several times. Install clean dry spark plug.
   - Start engine following usual starting procedure. If engine continues to flood, see an authorized Ski-Doo dealer.
3. No fuel to the engine (spark plug dry when removed).
   - Check fuel tank level; check condition of fuel and impulse lines and their connections. A failure of the fuel pump or carburetor has occurred. Contact an authorized Ski-Doo dealer.
4. Spark plug/ignition (no spark).
   - Install new spark plugs crank engine. If engine fails to start, contact an authorized Ski-Doo dealer.
5. Engine compression.
   - As the engine is pulled over with the rewind starter, “cycles” of resistance should be felt as piston goes past top dead center (each piston on multi-cylinder engines).
   - If no pulsating resistance is felt, it suggests a major loss of compression. Contact an authorized Ski-Doo dealer.

ENGINE RPM DOES NOT REACH CLUTCH ENGAGEMENT POINT
   - Properly install tether cord cap.
2. D.E.S.S. has read a different code than the one programmed. D.E.S.S. pilot lamp blinks rapidly (fast short beeps/repetitive).
   - Install a tether cord cap for which this snowmobile was programmed.

ENGINE LACKS ACCELERATION OR POWER
1. Fouled or defective spark plug.
   - Check item 4 of ENGINE IS CRANKED BUT FAILS TO START.
2. No fuel to engine.
   - Check item 3 of ENGINE IS CRANKED BUT FAILS TO START.
ENGINE LACKS ACCELERATION OR POWER (cont’d)

3. Carburetor adjustments.
   – Contact an authorized Ski-Doo dealer.

4. Incorrect drive pulley adjustment.
   – Adjust drive pulley, refer to MAINTENANCE PROCEDURES.

5. Drive and driven pulleys require servicing.
   – Contact an authorized Ski-Doo dealer.

   – Check coolant level, see MAINTENANCE PROCEDURES.
   – Check heat exchangers cleanliness. Clean if necessary.

7. Drive belt worn too thin.
   – If the drive belt has lost more than 3 mm (1/8 in) of its original width, it will affect vehicle performance.
   – Replace drive belt.

8. Incorrect track adjustment.
   – See MAINTENANCE and/or an authorized Ski-Doo dealer for proper alignment and tension adjustments.

ENGINE BACKFIRES

1. Faulty spark plug (carbon accumulation).
   – See item 4 of ENGINE IS CRANKED BUT FAILS TO START.

2. Engine is running too hot.
   – See item 6 of ENGINE LACKS POWER.

3. Ignition timing is incorrect or there is an ignition system failure.
   – Contact an authorized Ski-Doo dealer.

ENGINE MISFIRES

1. Fouled/defective/worn spark plugs.
   – Clean/verify spark plug gap and identification number. Replace as required.

2. Too much oil supplied to engine.
   – Improper oil pump adjustment, refer to an authorized Ski-Doo dealer.

   – Drain fuel system and refill with fresh fuel.

HEATED GRIPS/THUMB WARMERS ARE NOT WORKING

1. Engine RPM is too low.
   – Make sure engine RPM is above 2000.

ENGINE HAS SHUT DOWN

1. The engine shuts down after long periods of idling.
   – Do not let engine idle too long. Refer to VEHICLE WARM-UP in OPERATING INSTRUCTION.
TROUBLESHOOTING GUIDELINES (600 HO E-TEC AND 800R E-TEC)

ELECTRIC STARTER DOES NOT WORK
1. Emergency engine stop switch in OFF position or tether cord cap not installed on engine cut-off switch.
   - Place the emergency engine stop switch in the ON position and install tether cord cap (on engine cut-off switch).
2. Throttle applied while attempting an engine start.
   - Release throttle while cranking.

ENGINE IS CRANKED BUT FAILS TO START
1. No fuel to the engine.
   - Check fuel tank level, add fuel if necessary.
2. System voltage too low.
   - Contact an authorized Ski-Doo dealer.

ENGINE RPM DOES NOT REACH CLUTCH ENGAGEMENT POINT
   - Properly install tether cord cap.
2. D.E.S.S. has read a different code than the one programmed. D.E.S.S. pilot lamp blinks rapidly (fast short beeps/repetitive).
   - Install a tether cord cap for which this snowmobile was programmed.

ENGINE LACKS POWER
1. Engine warm-up in progress.
   - Drive vehicle at low speeds for a few minutes.
2. Engine break-in period not completed.
   - Complete break-in period.
3. Incorrect drive pulley adjustment.
   - Adjust drive pulley, refer to MAINTENANCE PROCEDURES.
4. Drive and driven pulleys require servicing.
   - Contact an authorized SKI-DOO dealer.
5. Engine overheats.
   - Check coolant level, see MAINTENANCE PROCEDURES.
   - Check heat exchangers cleanliness. Clean if necessary.
6. Drive belt worn too thin.
   - If the drive belt has lost more than 3 mm (1/8 in) of its original width, it will affect vehicle performance.
   - Replace drive belt.
7. Incorrect track adjustment.
   - See MAINTENANCE and/or an authorized SKI-DOO dealer for proper alignment and tension adjustments.
TROUBLESHOOTING GUIDELINES (600 HO E-TEC AND 800R E-TEC)

ENGINE LACKS POWER (cont’d)

   – Contact an authorized Ski-Doo dealer.

   – Contact an authorized Ski-Doo dealer.

ENGINE BACKFIRES

1. Engine is running too hot.
   – See item 5 of ENGINE LACKS POWER.

2. Ignition timing is incorrect or there is an ignition system failure.
   – Contact an authorized Ski-Doo dealer.

3. Exhaust system leak.
   – Contact an authorized Ski-Doo dealer.

   – Contact an authorized Ski-Doo dealer.

ENGINE MISFIRES

1. Water in fuel.
   – Drain fuel system and refill with fresh fuel.

2. RAVE valves malfunction.
   – Have RAVE valves system inspected by an authorized SKI-DOO dealer.

HEATED GRIPS/THUMB WARMERS ARE NOT WORKING

1. Engine RPM is too low.
   – Make sure engine RPM is above 2000.

ENGINE HAS SHUT DOWN

1. The engine shuts down after long periods of idling.
   – Do not let engine idle too long. Refer to VEHICLE WARM-UP in OPERATING INSTRUCTION.
MONITORING SYSTEM

Pilot Lamps, Messages and Beeper Codes

Gauge pilot lamp(s) will inform you if an anomaly occurs or to inform you of a particular condition.

TYPICAL — PILOT LAMPS

Pilot lamp can flash alone or in combination with another lamp.

On the multifunction analog/digital gauge, the display is used as a complement of the pilot lamps to give you a brief description if an anomaly occurs or to inform you of a particular condition.

1. Message display

Messages will be displayed with a beep code and pilot lamp(s).

Beeper codes will be heard and messages (depending on gauge model) will be displayed to catch your attention. See table below for details.
NOTE: Some of the listed pilot lamps and messages do not apply to all models. The message display is available only on the multifunction analog/digital gauge.

### Fault Codes

**Multifunction Analog/Digital Display Only**

To read any active fault code, press and hold MODE (M) Button and simultaneously depress the HI/LOW beam switch repeatedly several times.

If two or more codes are registered, use SET (S) or MODE (M) to scroll.

To exit the fault codes mode, press and hold MODE (M) button.

Contact an authorized Ski-Doo dealer for code signification.
WARRANTY
BRP LIMITED WARRANTY USA AND CANADA: 2012 SKI-DOO® SNOWMOBILES

1) SCOPE OF THE LIMITED WARRANTY

Bombardier Recreational Products Inc. ("BRP")* warrants its 2012 Ski-Doo snowmobiles sold by authorized BRP dealers (as defined below) in the fifty United States and Canada from defects in material or workmanship for the period and under the conditions described below. This limited warranty will become null and void if: (1) the snowmobile was used for racing or any other competitive activity, at any point, even by a previous owner; or (2) the snowmobile has been altered or modified in such a way so as to adversely affect its operation, performance or durability, or has been altered or modified to change its intended use.

All genuine Ski-Doo parts and accessories, installed by an authorized BRP dealer (as hereinafter defined) at the time of delivery of the 2012 Ski-Doo snowmobile, carry the same warranty as that of the snowmobile.

2) LIMITATIONS OF LIABILITY

THIS WARRANTY IS EXPRESSLY GIVEN AND ACCEPTED IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT THAT THEY CANNOT BE DISCLAIMED, THE IMPLIED WARRANTIES ARE LIMITED IN DURATION TO THE LIFE OF THE EXPRESS WARRANTY. INCIDENTAL AND CONSEQUENTIAL DAMAGES ARE EXCLUDED FROM COVERAGE UNDER THIS WARRANTY. SOME STATES/PROVINCES DO NOT ALLOW FOR THE DISCLAIMERS, LIMITATIONS AND EXCLUSIONS IDENTIFIED ABOVE, AS A RESULT, THEY MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC RIGHTS, AND YOU MAY ALSO HAVE OTHER LEGAL RIGHTS WHICH MAY VARY FROM STATE TO STATE, OR PROVINCE TO PROVINCE.

Neither the distributor any BRP dealer nor any other person has been authorized to make any affirmation, representation or warranty regarding the product, other than those contained in this limited warranty, and if made, shall not be enforceable against BRP.

BRP reserves the right to modify this warranty at any time, being understood that such modification will not alter the warranty conditions applicable to the products sold while this warranty is in effect.

3) EXCLUSIONS – ARE NOT WARRANTED

The following are not warranted under any circumstances:
- Normal wear and tear;
- Routine maintenance items, tune ups, adjustments;
- Damage caused by failure to provide proper maintenance and/or storage, as described in the Operator’s Guide;
- Damage resulting from removal of parts, improper repairs, service, maintenance, modifications or use of parts or accessories not manufactured or approved by BRP which in its reasonable judgement are either incompatible with the product or adversely affect its operation, performance and durability, or resulting from repairs done by a person that is not an authorized servicing BRP distributor/dealer;
– Damage caused by abuse, abnormal use, neglect, racing or operation of the product on surfaces other than snow, or operation of the product in a manner inconsistent with the recommended operation described in the Operator’s Guide;
– Damage resulting from accident, submersion, fire, snow or water ingestion, theft, vandalism or any act of God;
– Operation with fuels, oils or lubricants which are not suitable for use with the product (see the Operator’s Guide);
– Snow or water ingestion;
– Incidental or consequential damages, or damages of any kind including without limitation towing, storage, telephone, rental, taxi, inconvenience, insurance coverage, loan payments, loss of time, loss of income; and
– Damage resulting from studs installed on tracks if the installation does not conform to BRP’s instructions.

4) WARRANTY COVERAGE PERIOD

This warranty will be in effect from the date of delivery to the first retail consumer or the date the product is first put into use, whichever occurs first and for the following period:

TWELVE (12) CONSECUTIVE MONTHS, for private or commercial use owners. However, the warranty coverage period on a snowmobile delivered between June 1st and December 1st of a given year will expire November 30th of the following year.

Exhaust emission-related components that are installed on EPA certified snowmobiles registered in the USA are covered for thirty (30) consecutive months or 200 hours or 2500 miles (4000 km) of engine use whichever occurs first. If the 2500 miles (4000 km) are reached during the regular warranty coverage period, the emission-related components are still covered by BRP’s standard warranty until the end of regular coverage period. Evaporative emission related components that are installed on EPA certified snowmobiles registered in the USA are warranted for twenty-four (24) consecutive months.

To obtain a list of the current warranted emission-related components, please see an authorized Can-Am dealer.

The repair or replacement of parts or the performance of service under this warranty does not extend the life of this warranty beyond its original expiration date.

5) CONDITIONS REQUIRED FOR WARRANTY COVERAGE

This warranty coverage is available only if each of the following conditions has been fulfilled:
– The 2012 Ski-Doo snowmobile must be purchased as new and unused by its first owner from a BRP dealer authorized to distribute Ski-Doo snowmobiles in the country in which the sale occurred (“BRP dealer”);
– The BRP specified pre-delivery inspection process must be completed and documented and signed by the purchaser;
– The 2012 Ski-Doo snowmobile must have undergone proper registration by an authorized BRP dealer;
- The 2012 Ski-Doo snowmobile must be purchased in the country in which the purchaser resides; and
- Routine maintenance outlined in the Operator’s Guide must be timely performed in order to maintain warranty coverage. BRP reserves the right to make warranty coverage contingent upon proof of proper maintenance.

BRP will not honor this limited warranty to any private use owner or commercial use owner if one of the preceding conditions has not been met. Such limitations are necessary in order to allow BRP to preserve both the safety of its products, and also that of its consumers and the general public.

6) WHAT TO DO TO OBTAIN WARRANTY COVERAGE

The customer must cease using the snowmobile upon the appearance of an anomaly. The customer must notify a servicing BRP dealer within two (2) days of the appearance of a defect, and provide it with reasonable access to the product and reasonable opportunity to repair it. The customer must also present to the authorized BRP dealer, proof of purchase of the product and must sign the repair/work order prior to starting the repair in order to validate the warranty repair. All parts replaced under this limited warranty become the property of BRP.

7) WHAT BRP WILL DO

BRP’s obligations under this warranty are limited to, at its sole discretion, repairing parts found defective under normal use, maintenance and service, or replacing such parts with new genuine Ski-Doo parts without charge for parts and, at any authorized BRP dealer during the warranty coverage period under the conditions described herein. No claim of breach of warranty shall be cause for cancellation or rescission of the sale of the snowmobile to the owner.

In the event that service is required outside of the country of original sale, the owner will bear responsibility for any additional charges due to local practices and conditions, such as, but not limited to, freight, insurance, taxes, license fees, import duties, and any and all other financial charges, including those levied by governments, states, territories and their respective agencies.

BRP reserves the right to improve or modify products from time to time without assuming any obligation to modify products previously manufactured.

8) TRANSFER

If the ownership of a product is transferred during the warranty coverage period, this warranty shall also be transferred and be valid for the remaining coverage period provided that BRP is notified of such transfer of ownership in the following way:

1. The former owner contacts BRP (at the phone number provided below) or an authorized BRP dealer and gives the coordinates of the new owner; or
2. BRP or an authorized BRP dealer receives a proof that the former owner agreed to the transfer of ownership, in addition to the coordinates of the new owner.
9) CONSUMER ASSISTANCE

In the event of a controversy or a dispute in connection with this limited warranty, BRP suggests that you try to resolve the issue at the dealership level. We recommend discussing the issue with the authorized dealer’s service manager or owner. If the issue has not yet been resolved, please submit your complaint in writing or call the appropriate number below:

BRP INTERNATIONAL LIMITED WARRANTY: 2012
SKI-DOO® SNOWMOBILES

1) SCOPE OF THE LIMITED WARRANTY
Bombardier Recreational Products Inc. ("BRP")* warrants its 2012 Ski-Doo snowmobiles sold by authorized BRP distributor/dealer (as hereinafter defined) outside of the fifty United States, Canada and states members of the European Economic Area ("EEA") (which is comprised of the states member of the European Union plus Norway, Iceland and Liechtenstein) Turkey, and states members of the Commonwealth of the Independent States ("CIS") (which is comprised of the Russian Federation and ex-members states of the USSR), from defects in material or workmanship for the period and under the conditions described below. This limited warranty will become null and void if: (1) the snowmobile was used for racing or any other competitive activity, at any point, even by a previous owner; or (2) the snowmobile has been altered or modified in such a way so as to adversely affect its operation, performance or durability, or has been altered or modified to change its intended use.

All genuine Ski-Doo parts and accessories, installed by an authorized BRP distributor/dealer at the time of delivery of the 2012 Ski-Doo snowmobile, carry the same warranty as that of the snowmobile.

2) LIMITATIONS OF LIABILITY
THIS WARRANTY IS EXPRESSLY GIVEN AND ACCEPTED IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT THAT THEY CANNOT BE DISCLAIMED, THE IMPLIED WARRANTIES ARE LIMITED IN DURATION TO THE LIFE OF THE EXPRESS WARRANTY. INCIDENTAL AND CONSEQUENTIAL DAMAGES ARE EXCLUDED FROM COVERAGE UNDER THIS WARRANTY. SOME STATES/PROVINCES DO NOT ALLOW FOR THE DISCLAIMERS, LIMITATIONS AND EXCLUSIONS IDENTIFIED ABOVE, AS A RESULT, THEY MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC RIGHTS, AND YOU MAY ALSO HAVE OTHER LEGAL RIGHTS WHICH MAY VARY FROM COUNTRY TO COUNTRY.

Neither the distributor any BRP distributor/dealer nor any other person has been authorized to make any affirmation, representation or warranty regarding the product, other than those contained in this limited warranty, and if made, shall not be enforceable against BRP.

BRP reserves the right to modify this warranty at any time, being understood that such modification will not alter the warranty conditions applicable to the products sold while this warranty is in effect.

3) EXCLUSIONS – ARE NOT WARRANTED
The following are not warranted under any circumstances:
- Normal wear and tear;
- Routine maintenance items, tune ups, adjustments;
- Damage caused by failure to provide proper maintenance and/or storage, as described in the Operator’s Guide;
- Damage resulting from removal of parts, improper repairs, service, maintenance, modifications or use of parts or accessories not manufactured or approved by BRP which in its reasonable judgement are either incompatible with the product or adversely affect its operation, performance and durability, or resulting from repairs done by a person that is not an authorized servicing BRP distributor/dealer;
- Damage caused by abuse, abnormal use, neglect, racing or operation of the product on surfaces other than snow, or operation of the product in a manner inconsistent with the recommended operation described in the Operator’s Guide;
- Damage resulting from accident, submersion, fire, snow or water ingestion, theft, vandalism or any act of God;
- Operation with fuels, oils or lubricants which are not suitable for use with the product (see the Operator’s Guide);
- Damages from rust, corrosion or exposure to the elements;
- Incidental or consequential damages, or damages of any kind including without limitation towing, storage, telephone, rental, taxi, inconvenience, insurance coverage, loan payments, loss of time, loss of income; and
- Damage resulting from studs installed on tracks if the installation does not conform to BRP’s instructions.

4) WARRANTY COVERAGE PERIOD
This warranty will be in effect from (1) the date of delivery to the first retail consumer or (2) the date the product is first put into use, whichever occurs first and for a period of:
TWELVE (12) CONSECUTIVE MONTHS, for private or commercial use owners.
However, the warranty coverage period on a snowmobile delivered between June 1st and December 1st of a given year will expire November 30th of the following year.
The repair or replacement of parts or the performance of service under this warranty does not extend the life of this warranty beyond its original expiration date.
Note that the duration and any other modalities of the warranty coverage are subject to the applicable national or local legislation in the customer’s country.

FOR PRODUCTS SOLD IN AUSTRALIA ONLY
"Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure."
5) CONDITIONS TO HAVE WARRANTY COVERAGE

This warranty coverage is available only if each of the following conditions has been fulfilled:

– The 2012 Ski-Doo snowmobile must be purchased as new and unused by its first owner from a BRP distributor/dealer authorized to distribute Ski-Doo snowmobiles in the country in which the sale occurred (“BRP distributor/dealer”);
– The BRP specified pre-delivery inspection process must be completed and documented;
– The product must have undergone proper registration by an authorized BRP distributor/dealer;
– The 2012 Ski-Doo snowmobile must be purchased in the country or union of countries in which the purchaser resides.
– Routine maintenance outlined in the Operator’s Guide must be timely performed in order to maintain warranty coverage. BRP reserves the right to make warranty coverage contingent upon proof of proper maintenance.

BRP will not honour this limited warranty to any private use owner or commercial use owner if one the preceding conditions has not been met. Such limitations are necessary in order to allow BRP to preserve both the safety of its products, and also that of its consumers and the general public.

6) WHAT TO DO TO OBTAIN WARRANTY COVERAGE

The customer must cease using the snowmobile upon the appearance of an anomaly. The customer must notify a servicing BRP distributor/dealer within two (2) days of the appearance of a defect, and provide it with reasonable access to the product and reasonable opportunity to repair it. The customer must also present to the authorized BRP distributor/dealer, proof of purchase of the product and must sign the repair/work order prior to starting the repair in order to validate the warranty repair. All parts replaced under this limited warranty become the property of BRP.

Note that the notification period is subject to the applicable national or local legislation in customer’s country.

7) WHAT BRP WILL DO

BRP’s obligations under this warranty are limited to, at its sole discretion, repairing parts found defective under normal use, maintenance and service, or replacing such parts with new genuine Ski-Doo parts without charge for parts and labour, at any authorized BRP distributor/dealer during the warranty coverage period under the conditions described herein. BRP’s responsibility is limited to making the required repairs or replacements of parts. No claim of breach of warranty shall be cause for cancellation or rescission of the sale of the snowmobile to the owner.

In the event that service is required outside of the country of original sale, the owner will bear responsibility for any additional charges due to local practices and conditions, such as, but not limited to, freight, insurance, taxes, license fees, import duties, and any and all other financial charges, including those levied by governments, states, territories and their respective agencies.

BRP reserves the right to improve or modify products from time to time without assuming any obligation to modify products previously manufactured.
8) **TRANSFER**

If the ownership of a product is transferred during the warranty coverage period, this warranty shall also be transferred and be valid for the remaining coverage period provided BRP or an authorized BRP distributor/dealer receives a proof that the former owner agreed to the transfer of ownership, in addition to the co-ordinates of the new owner.

9) **CONSUMER ASSISTANCE**

In the event of a controversy or a dispute in connection with this limited warranty, BRP suggests that you try to resolve the issue at the dealership level. We recommend discussing the issue with the authorized distributor/dealer’s service manager or owner. If further assistance is required, the distributor’s service department should be contacted in order to resolve the matter. If the matter still remains unresolved then contact BRP at the address listed below.

BRP LIMITED WARRANTY FOR THE EUROPEAN AND THE RUSSIAN ECONOMIC AREAS AND TURKEY ECONOMIC AREA: 2012 SKI-DOO® SNOWMOBILES

1) SCOPE OF THE LIMITED WARRANTY

Bombardier Recreational Products Inc. ("BRP")* warrants its 2012 Ski-Doo snowmobiles sold by authorized BRP distributor/dealer (as hereinafter defined) in states members of the European Economic Area, ("EEA") (which is comprised of the states member of the European Union plus Norway, Iceland and Liechtenstein) in member states of the Commonwealth of the Independent States ("CIS") (which is comprised of the Russian Federation and ex-members states of the USSR), and Turkey from defects in material or workmanship for the period and under the conditions described below. This limited warranty will become null and void if: (1) the snowmobile was used for racing or any other competitive activity, at any point, even by a previous owner; or (2) the snowmobile has been altered or modified in such a way so as to adversely affect its operation, performance or durability, or has been altered or modified to change its intended use.

All genuine Ski-Doo parts and accessories, installed by an authorized BRP distributor/dealer (at the time of delivery of the 2012 Ski-Doo snowmobile, carry the same warranty as that of the snowmobile.

2) LIMITATIONS OF LIABILITY

THIS WARRANTY IS EXPRESSLY GIVEN AND ACCEPTED IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT THAT THEY CANNOT BE DISCLAIMED, THE IMPLIED WARRANTIES ARE LIMITED IN DURATION TO THE LIFE OF THE EXPRESS WARRANTIES. INCIDENTAL AND CONSEQUENTIAL DAMAGES ARE EXCLUDED FROM COVERAGE UNDER THIS WARRANTY. SOME JURISDICTIONS DO NOT ALLOW FOR THE DISCLAIMERS, LIMITATIONS AND EXCLUSIONS IDENTIFIED ABOVE, AS A RESULT, THEY MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC RIGHTS, AND YOU MAY ALSO HAVE OTHER LEGAL RIGHTS WHICH MAY VARY FROM COUNTRY TO COUNTRY.

Neither the distributor any BRP distributor/dealer nor any other person has been authorized to make any affirmation, representation or warranty regarding the product, other than those contained in this limited warranty, and if made, shall not be enforceable against BRP.

BRP reserves the right to modify this warranty at any time, being understood that such modification will not alter the warranty conditions applicable to the products sold while this warranty is in effect.

3) EXCLUSIONS – ARE NOT WARRANTED

The following are not warranted under any circumstances:
– Normal wear and tear;
– Routine maintenance items, tune ups, adjustments;
– Damage caused by failure to provide proper maintenance and/or storage, as described in the Operator’s Guide;

____________________
– Damage resulting from removal of parts, improper repairs, service, maintenance, modifications or use of parts or accessories not manufactured or approved by BRP which in its reasonable judgement are either incompatible with the product or adversely affect its operation, performance and durability, or resulting from repairs done by a person that is not an authorized servicing BRP distributor/dealer;
– Damage caused by abuse, abnormal use, neglect, racing or operation of the product on surfaces other than snow, or operation of the product in a manner inconsistent with the recommended operation described in the Operator’s Guide;
– Damage resulting from accident, submersion, fire, snow or water ingestion, theft, vandalism or any act of God;
– Operation with fuels, oils or lubricants which are not suitable for use with the product (see the Operator’s Guide);
– Damages from rust, corrosion or exposure to the elements;
– Incidental or consequential damages, or damages of any kind including without limitation towing, storage, telephone, rental, taxi, inconvenience, insurance coverage, loan payments, loss of time, loss of income; and
– Damage resulting from studs installed on tracks if the installation does not conform to BRP’s instructions.

4) WARRANTY COVERAGE PERIOD
This warranty will be in effect from (1) the date of delivery to the first retail consumer or (2) the date the product is first put into use, whichever occurs first and for a period of:
TWENTY-FOUR (24) CONSECUTIVE MONTHS, for private use owners and TWELVE (12) CONSECUTIVE MONTHS for commercial use owners. However, the warranty coverage period on a snowmobile delivered between June 1st and December 1st of a given year will expire November 30th of the applicable year. A snowmobile is used commercially when it is used in connection with generating income or any work or employment during any part of the warranty period. A snowmobile is also used commercially when, at any point during the warranty period, it has commercial tags or is licensed for commercial use.
The repair or replacement of parts or the performance of service under this warranty does not extend the life of this warranty beyond its original expiration date.
Note that the duration and any other modalities of the warranty coverage are subject to the applicable national or local legislation in the customer’s country.

5) CONDITIONS TO HAVE WARRANTY COVERAGE
This warranty coverage is available only if each of the following conditions has been fulfilled:
– The 2012 Ski-Doo snowmobile must be purchased as new and unused by its first owner from a BRP distributor/dealer authorized to distribute Ski-Doo products in the country in which the sale occurred ("BRP distributor/dealer”); 
– The BRP specified pre-delivery inspection process must be completed and documented;
– The product must have undergone proper registration by an authorized BRP distributor/dealer;
The 2012 Ski-Doo snowmobile must be purchased within the EEA by an EEA resident, in the CIS for residents of the countries comprised in such area and in Turkey for residents of Turkey; and

Routine maintenance outlined in the Operator’s Guide must be timely performed in order to maintain warranty coverage. BRP reserves the right to make warranty coverage contingent upon proof of proper maintenance.

BRP will not honour this limited warranty to any private use owner or commercial use owner if one of the preceding conditions has not been met. Such limitations are necessary in order to allow BRP to preserve both the safety of its products, and also that of its consumers and the general public.

6) WHAT TO DO TO OBTAIN WARRANTY COVERAGE

The customer must cease using the snowmobile upon the appearance of an anomaly. The customer must notify a servicing BRP distributor/dealer within two (2) months of the appearance of a defect, and provide it with reasonable access to the product and reasonable opportunity to repair it. The customer must also present to the authorized BRP distributor/dealer, proof of purchase of the product and must sign the repair/work order prior to starting the repair in order to validate the warranty repair. All parts replaced under this limited warranty become the property of BRP.

Note that the notification period is subject to the applicable national or local legislation in customer’s country.

7) WHAT BRP WILL DO

BRP’s obligations under this warranty are limited to, at its sole discretion, repairing parts found defective under normal use, maintenance and service, or replacing such parts with new genuine Ski-Doo parts without charge for parts and labour, at any authorized BRP distributor/dealer during the warranty coverage period under the conditions described herein. BRP’s responsibility is limited to making the required repairs or replacements of parts. No claim of breach of warranty shall be cause for cancellation or rescission of the sale of the snowmobile to the owner.

In the event that service is required outside of the EEA, CIS or Turkey, the owner will bear responsibility for any additional charges due to local practices and conditions, such as, but not limited to, freight, insurance, taxes, license fees, import duties, and any and all other financial charges, including those levied by governments, states, territories and their respective agencies.

BRP reserves the right to improve or modify products from time to time without assuming any obligation to modify products previously manufactured.

8) TRANSFER

If the ownership of a product is transferred during the warranty coverage period, this warranty shall also be transferred and be valid for the remaining coverage period provided BRP or an authorized BRP distributor/dealer receives a proof that the former owner agreed to the transfer of ownership, in addition to the co-ordinates of the new owner.
9) CONSUMER ASSISTANCE

In the event of a controversy or a dispute in connection with this limited warranty, BRP suggests that you try to resolve the issue at the dealership level. We recommend discussing the issue with the authorized distributor/dealer’s service manager or owner. If further assistance is required, the distributor’s service department should be contacted in order to resolve the matter. If the matter still remains unresolved then contact BRP at the address listed below:

CHANGE OF ADDRESS/OWNERSHIP

If your address has changed or if you are the new owner of the Snowmobile, be sure to notify BRP by either:
- Mailing one of the change of address cards on the following pages
- North America only: Calling at 715 848-4957 (USA) or 819 566-3366 (Canada)
- Notifying an authorized Ski-Doo dealer.

In case of change of ownership, please join a proof that the former owner agreed to the transfer.

Notifying BRP, even after the expiration of the limited warranty, is very important as it enables BRP to reach the Snowmobile owner if necessary, like when safety recalls are initiated. It is the owner’s responsibility to notify BRP.

**STOLEN UNITS:** If your personal Snowmobile is stolen, you should notify BRP or an authorized Ski-Doo dealer. We will ask you to provide your name, address, phone number, the vehicle identification number and the date it was stolen.
